Palatin Technologies, Inc.

NYSE American: PTN

CORPORATE PRESENTATION

January 2026

Carl Spana, Ph.D.
President & CEO

Stephen T. Wills, CPA/MST
CFO / COO

Forward Looking Statements

The statements in this presentation that relate to future plans, events or performance are forward-looking statements, which are made pursuant to the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended. Such forward-looking statements involve significant risks and uncertainties, and actual results, events and performance may differ materially from those expressed or implied in this presentation. We have based these forward-looking statements largely on our current expectations and projections about future events and financial trends that we believe may affect our financial condition, results of operations, business strategy and financial needs. These forward-looking statements include, but are not limited to, statements concerning the following: (i) estimates of our expenses, future revenue and capital requirements; (ii) our ability to obtain additional funding on terms acceptable to us, or at all; (iii) our ability to advance product candidates into, and successfully complete, clinical trials; (iv) the initiation, timing, progress and results of future preclinical studies and clinical trials, and our research and development programs; (v) the timing or likelihood of regulatory filings and approvals; (vi) our expectation regarding timelines for development of our other product candidates; (vii) the potential for commercialization of our other product candidates, if approved for commercial use; (viii) our ability and the ability of our licensees to compete with other products and technologies similar to our product candidates; (ix) the ability of third party collaborators to timely carry out their duties under their agreements with us and our licensees; (x) the ability of contract manufactures to perform their manufacturing activities in compliance with applicable regulations; (xi) our ability to recognize the potential value of our licensing arrangements with third parties; (xii) the potential to achieve revenues from the sale of our product candidates; (xiii) our ability to maintain product liability insurance at a reasonable cost or in sufficient amounts, if at all; (xiv) the retention of key management, employees and third-party contractors; (xv) the scope of protection we are able to establish and maintain for intellectual property rights covering our product candidates and technology; (xvi) our compliance with federal and state laws and regulations; (xvii) the timing and costs associated with obtaining regulatory approval for our product candidates; (xviii) the impact of legislative or regulatory healthcare reforms in the United States; and (xix) other risks disclosed in our SEC filings. The forward-looking statements in this presentation do not constitute guarantees of future performance. We undertake no obligation to publicly update these forward-looking statements to reflect events or circumstances that occur after the date of this presentation.

PALATIN

Company Profile

Technology platform – targeting the melanocortin system

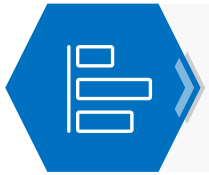
Therapeutics for Obesity, Inflammatory & Autoimmune Diseases

Demonstrated expertise moving programs from discovery to FDA approval

Expertise in the biology and chemistry of melanocortin system (MCS)

1st company to gain FDA approval for a melanocortin agent - Vyleesi® for female sexual dysfunction

MOA with potential to modify underlying disease pathologies – not just treat symptoms



Strategy leverages our expertise across multiple therapeutic opportunities

PALATIN

Palatin Leadership

Strong team, with broad and extensive biopharma experience

Carl Spana, PhD
President and Chief Executive Officer

Co-founder with 25-plus years in drug research, development, approval and board directorships

Stephen T. Wills, CPA/MST
Chief Financial Officer and Chief Operating Officer

25-plus years in finance, operations, M&A, licensing, capital markets and board directorships

John Dodd, PhD
Senior Vice President Research / Development

40-plus years in drug discovery and development

J. Don Wang, PhD
Vice President Product Development

30-plus years in CMC and supply chain

Stephen A. Slusher
Chief Legal Officer

30-plus years of legal leadership with a focus on Intellectual property

Robert Jordan
Senior Vice President Program Operations

20-plus years in drug development and clinical operations

James Hattersley
Senior Vice President Business Development

25-plus years of identifying and executing deals

Bristol Myers Squibb™ · SB · AR · SUN PHARMA · DERMASCIENCES A TISSUE REGENERATION COMPANY · NEKTAR · Santen · Johnson&Johnson · tolmar · Abbott · Caltech

PALATIN

Development Programs

Novel 'next generation' MC4R agonists for treatment of acquired and congenital obesity

Multiple Clinical Trials Targeted in 2026 with Novel MC4R Compounds

Product/Indication	R&D	Phase 1	Phase 2	Phase 3	NDA	Status/Next Steps
PL7737 Oral Small Molecule MC4R Agonist Multiple obesity indications with focus on hypothalamic obesity						Daily dosing format **IND enabling – CMC activities ongoing** **IND filing 1H26** **Phase 1 SAD/MAD start 1H26 / data 2H26**
Novel Once-Weekly Peptide MC4R Agonist Multiple obesity indications with focus on hypothalamic obesity						Identify optimal compound 1H26 Daily and extended dosing formats **IND enabling – CMC activities ongoing** **IND filing mid-2026** **Phase 1 SAD/MAD start 2H26 / data 2H26**
Bremelanotide (PoC Study) Obesity GLP-1 adjunct therapy Proof-of-concept study only						Phase 2 - tirzepatide patients **Positive Topline data reported 1Q25**

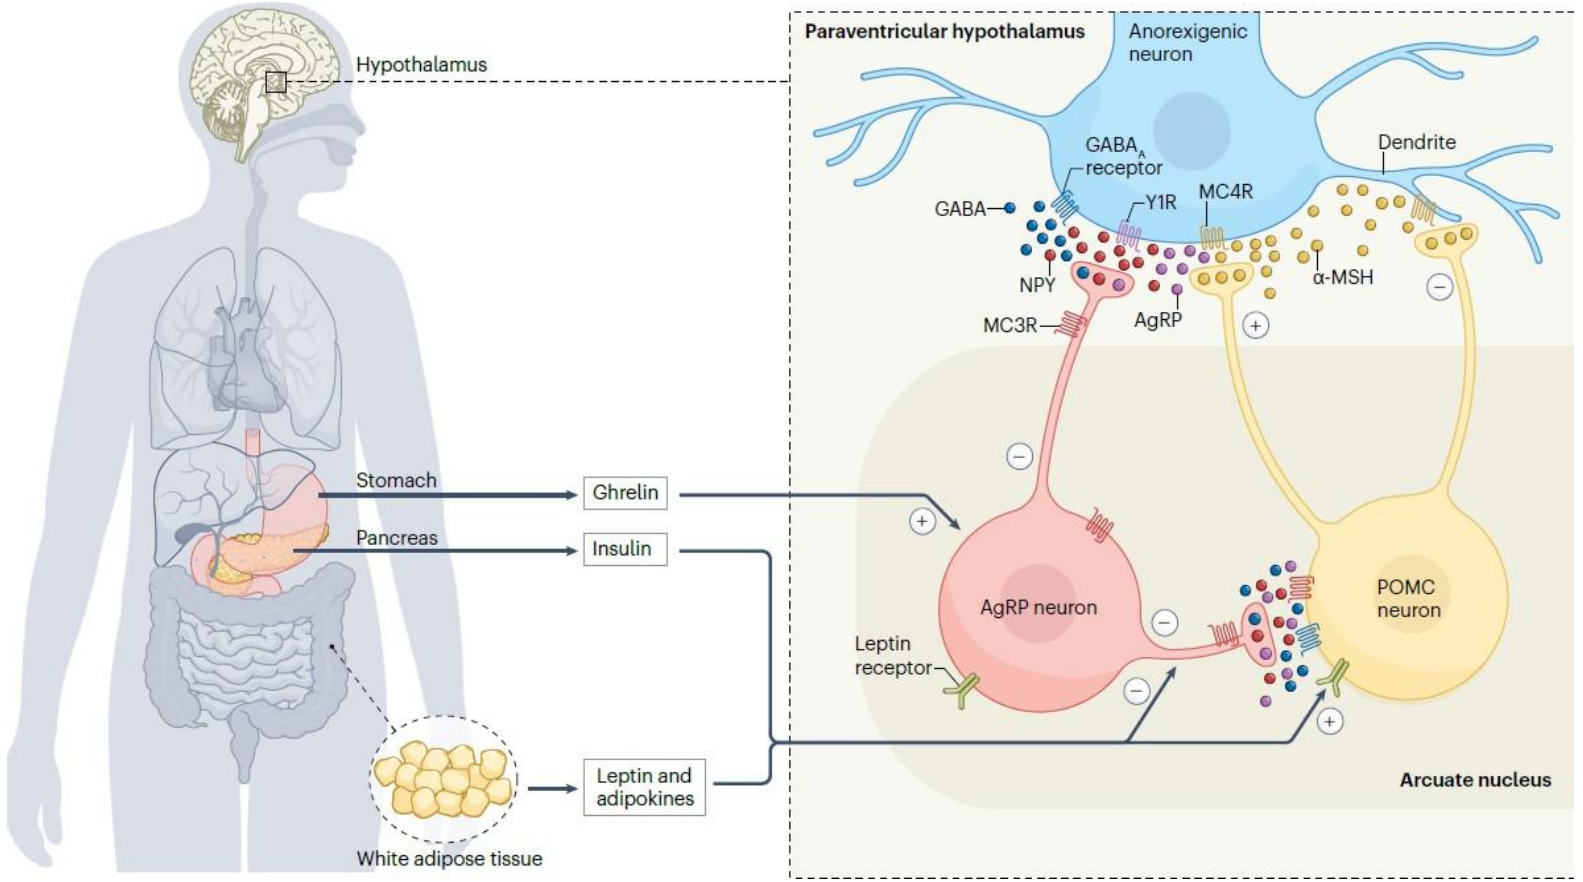
Hypothalamic Obesity (HO) patients to be included in Phase 1 SAD/MAD studies / program

PL7737 granted FDA orphan drug designation for obesity due to leptin receptor (LEPR) deficiency

PALATIN

MC4R Obesity Programs

MC4R pathway regulates obesity and energy management through satiety & food intake



Central leptin-melanocortin pathway is a critical pathway that regulates feeding and body weight to maintain energy homoeostasis

Sweeney, P et.al. Nature Reviews Endocrinology 2023 Sep;10(9):507-519

Hypothalamic Obesity (HO)

PALATIN

Hypothalamic Obesity (HO)

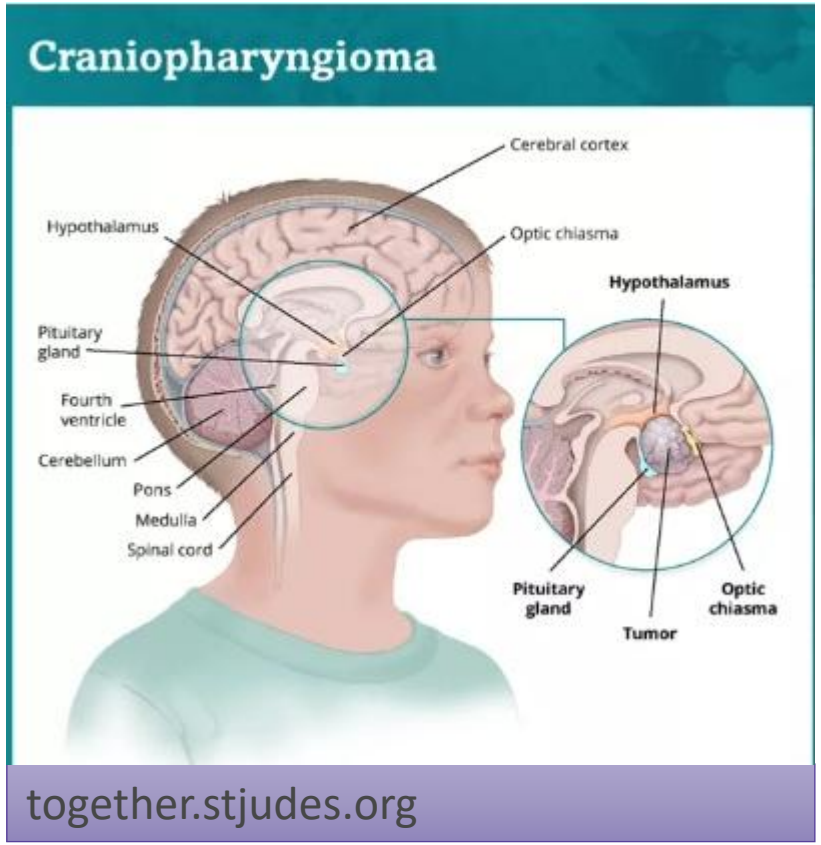
A rare, form of obesity following injury to the hypothalamus

Acquired HO

- **Craniopharyngioma** are brain tumors that develop near the hypothalamus and pituitary gland
- Treatments include tumor resection surgery, radiation or both
- Treatment damages the hypothalamus leading to disruption of **MC4R signaling pathway** causing reduced energy, hyperphagia and rapid-onset, severe obesity

Congenital HO

- Hypothalamic dysfunction as a result of a genetic disorder which can disrupt **MC4R signaling pathway** causing reduced energy, hyperphagia and rapid-onset, severe obesity



together.stjudes.org

PALATIN

MC4R Obesity Programs for Treating Acquired and Congenital Obesity

Palatin's next generation melanocortin agonists for the advanced treatment of HO

Acquired Hypothalamic Obesity (HO)

5,000 – 10,000
estimated U.S. prevalence*

3,500 – 10,000
estimated European prevalence**

5,000 – 8,000
estimated Japanese prevalence***

- ✓ High unmet and unsatisfied medical need
- ✓ MC4R agonism is a validated target
- ✓ Patients will require life-long treatment
- ✓ Patients are easily identified
- ✓ Patients are engaged with the health system receiving specialist care for endocrine complications

* U.S. estimates based on reported incidence of hypothalamic obesity following craniopharyngioma and long-term survival rates, (Zacharia, et al., Neuro-Oncology 14(8):1070–1078, 2012. doi:10.1093/neuonc/nos142; and Muller, et al., Neuro-Oncology 17(7), 1029–1038, 2015 doi:10.1093/neuonc/nov044.)

** European estimates limited to the EU4 (Germany, France, Spain, Italy), UK and the Netherlands and prevalence of 0.1-0.3 in 10,000 patients

*** Palatin estimates the prevalence of acquired hypothalamic obesity in Japan to be approximately 5,000 to 8,000 based on our review of certain data; Prevalence is 2-3 times higher than in the USA & Europe due to a higher reported frequency of craniopharyngioma.

PALATIN

Melanocortin-4 Receptor (MC4R) Obesity Programs

- *Novel "Next Generation" MC4R Selective Agonists*
  - *PL7737 Oral MC4R Selective Small Molecule*
  - *MC4R Selective Peptides Once Weekly Dosing*

PALATIN

Melanocortin-4 Receptor (MC4R) Obesity Programs

MC4R selective oral small molecule programs for acquired and congenital obesity

Current Therapy Challenges	Palatin Achieved Solutions
Injection Frequency	Palatin identified small molecules show excellent preclinical oral bioavailability
Skin Pigmentation	Palatin small molecules interact weakly with MC1 receptors, and with limited potential to cause skin pigmentation
Nausea / Vomiting	Palatin research has identified multiple approaches to reduce GI AE's
Cardiovascular Effects	Multiple structural features in Palatin compounds have demonstrated the ability to eliminate cardiovascular effects

PALATIN

MC4R Obesity Programs for Acquired and Congenital Obesity

Novel "next generation" MC4R selective agonists: understanding what is required for success

Historically, MC4R small molecule programs have failed due to a lack of understanding the receptor biology and the structure/function relationship that determine weight loss versus side effects.

Target profile for orally active selective MC4R agonist:

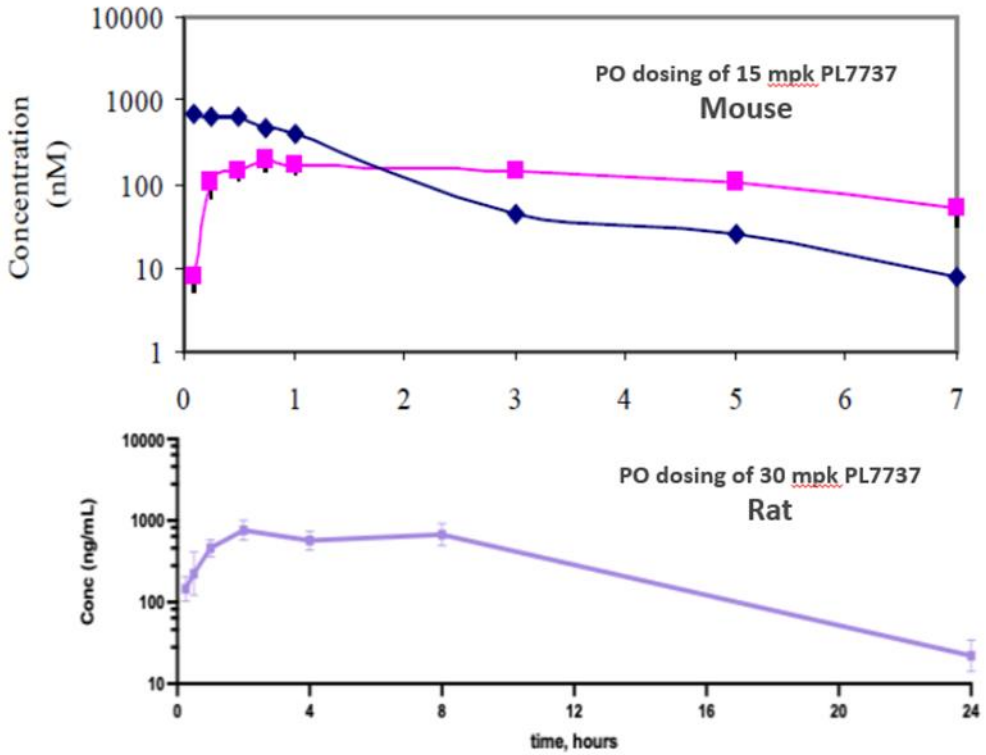
- Optimal PK curve for max therapeutic window
- Properties required for a successful oral small molecule
  - ✓ Molecular weight
  - ✓ Polar surface area
  - ✓ hERG activity
  - ✓ Human plasma protein binding
  - ✓ CYP activity
- MC4R mechanism-based weight loss
- Limited MC1R activity (hyperpigmentation minimized)
- No sexual or blood pressure effects
- 30-day non-GLP toxicity completed
- IP protection out to 2044, with patent term extension

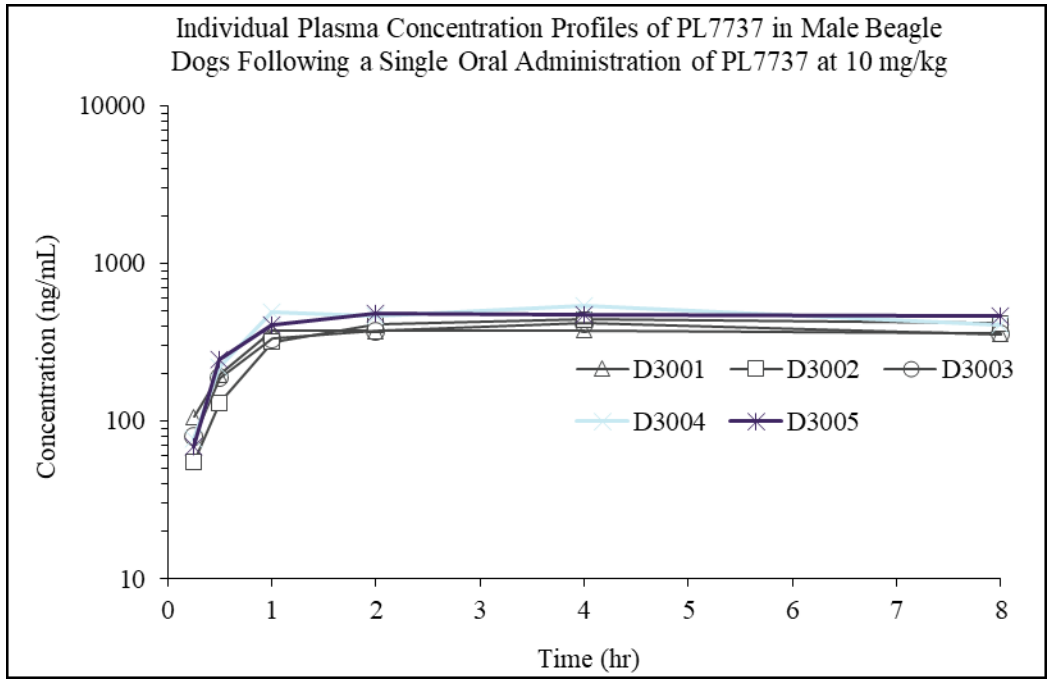
Palatin's PL7737 has the TARGET PROFILE for a successful MC4R selective, oral small molecule entity.

PALATIN

MC4R Obesity Programs for Acquired and Congenital Obesity

Ideal PK profile for an obesity treatment (PK consistency across mouse, rat, dog)





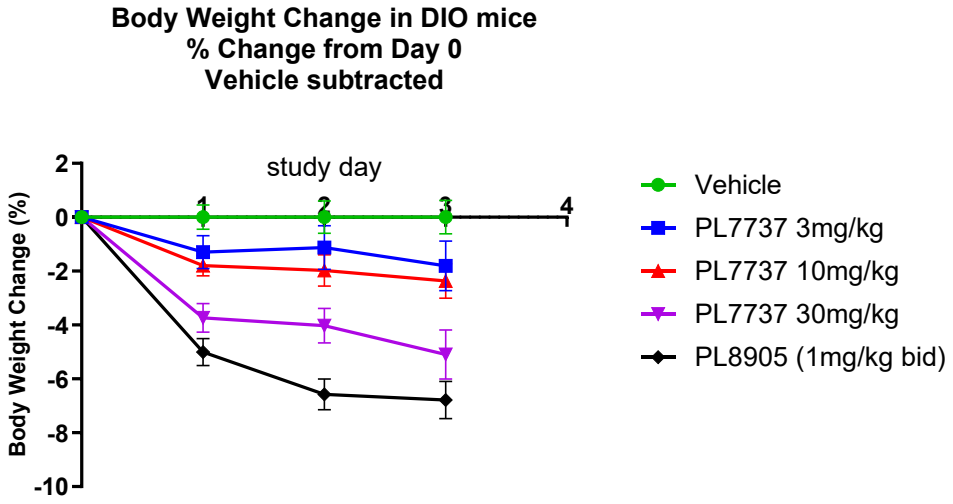
- Oral administration
- Protein binding facilitates efficacious levels without surpassing them
- PL7737 does not have a high transient Cmax helps to avoid AE's
- Once per day dosing with steady state reached day 3
- Low PK variability

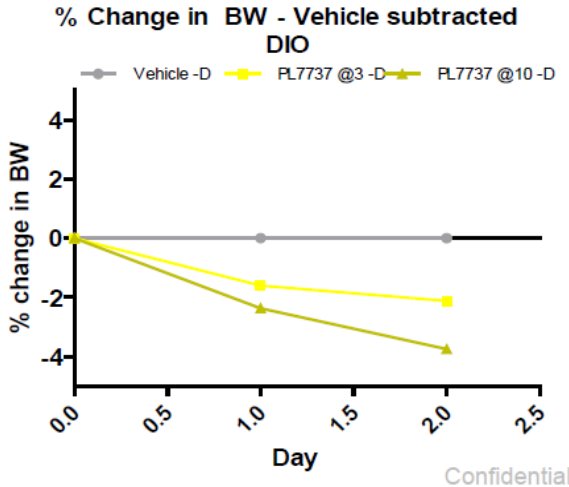
PALATIN

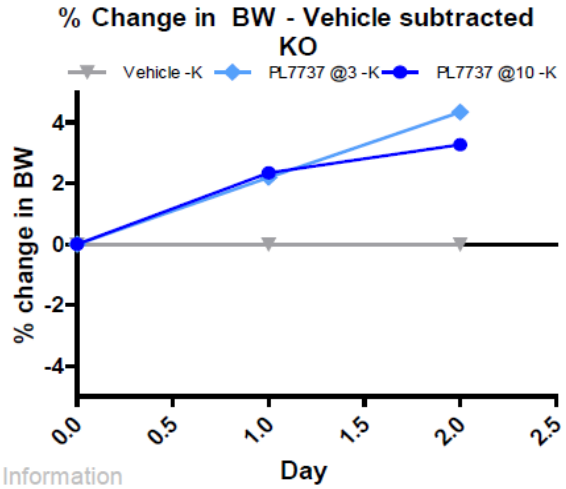
MC4R Obesity Programs for Acquired and Congenital Obesity

MC4R selective oral small molecule PL7737 @ 3, 10 and 30mg/kg reduces body weight in DIO mice

PL7737 is a novel MC4R selective oral small molecule agonist.







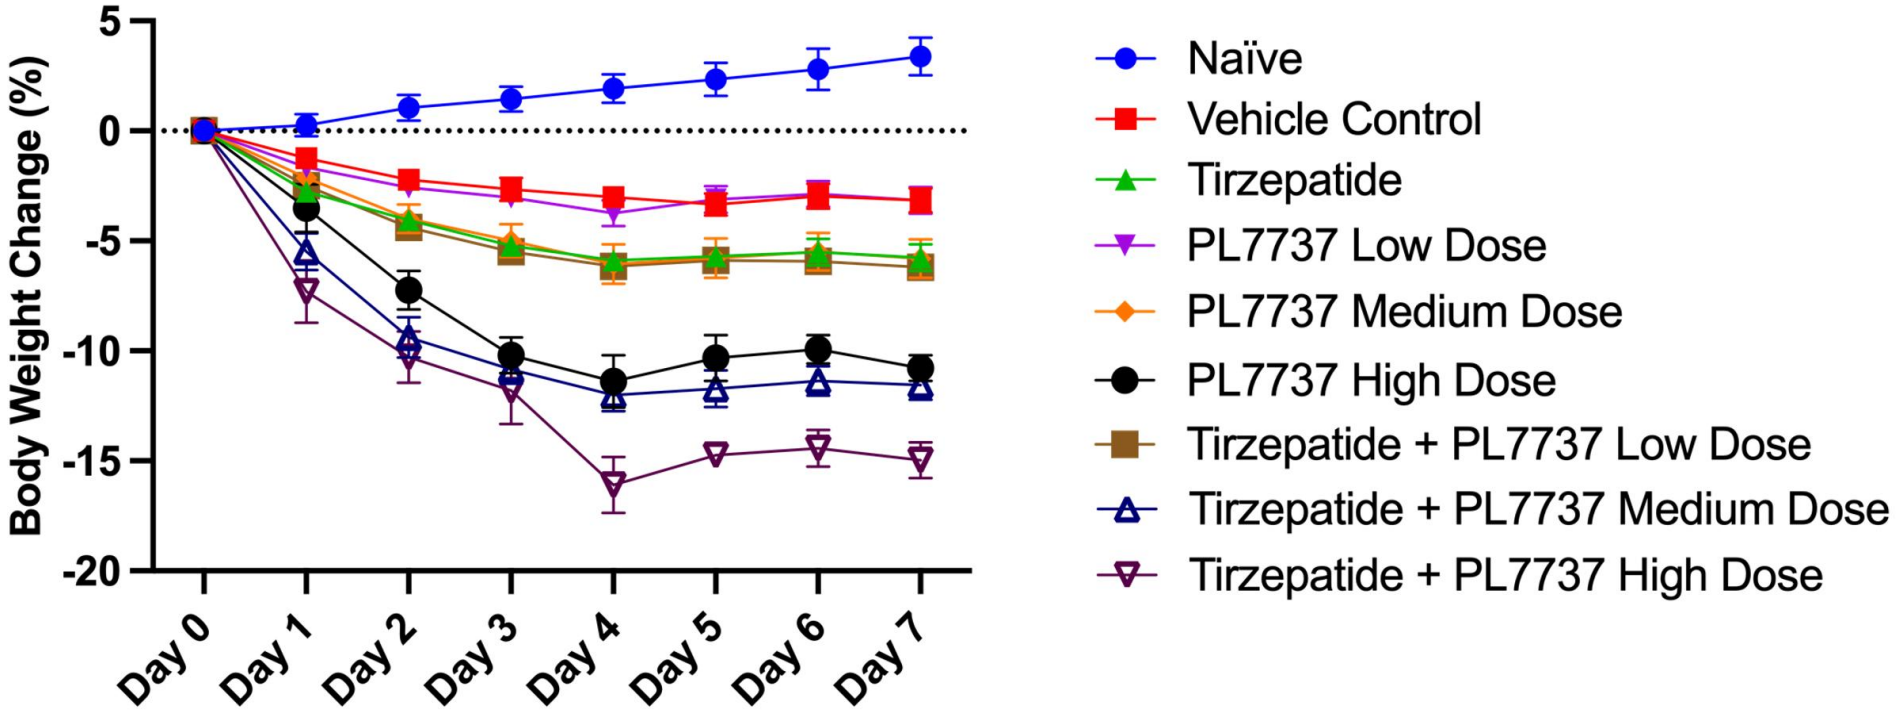
- PL7737 oral dosing days 0, 1 & 2
- PL8905 SC BID (selective peptide MC4R agonist)
- Oral treatment with PL7737 resulted in significant body weight loss
- Effects of PL7737 is MC4R dependent

PALATIN

MC4R Obesity Programs for Acquired and Congenital Obesity

Oral PL7737 monotherapy causes significant weight loss in diet-induced obesity (DIO) rats

PL7737 is a novel MC4R selective oral small molecule agonist.



- PL7737 dosed orally at 3, 10 and 30mg/kg
- PL7737 monotherapy had rapid, dose-dependent weight loss with of 4 days of tx
- PL7737 + Tirzepatide - additive effect on weight loss
- No observed hyperpigmentation

[NOTE: Dose of tirzepatide = 2 nmol/kg, SC injection, once daily]

PALATIN

MC4R Obesity Programs for Acquired and Congenital Obesity

Current & planned activities for PL7737 novel MC4R selective oral small molecule agonist

IND-enabling toxicology activities started

- Toxicology studies ongoing
- IND planned for submission in 1H 2026

CMC activities ongoing

- Target dose 160mg QD
- Non-GMP tox API being manufactured
- GMP clinical API manufacture initiated
- Phase 1/2 drug product planned for delivery by year end 2025

Phase 1 SAD/MAD, including hypothalamic obesity (HO) patients, planned for 1H 2026 start

- SAD data 2H 2026
  - Healthy obese patients
- MAD data 2H 2026
  - Healthy obese patients and a cohort of HO patients

PALATIN

Novel "Next Generation" MC4R Selective Peptide Agonists

Legacy challenges of MC4R peptide agonists have been solved

Current Therapy Challenges	Palatin Achieved Solutions
Injection Frequency	Palatin's compounds with high potency coupled with structural elements, extend drug residency time (≥ 1 week)
Skin Pigmentation	Multiple structural elements have been identified by Palatin and demonstrate reduced MC1R agonism (a known contributor to hyperpigmentation)
Nausea / Vomiting	Palatin research has identified multiple approaches to reduce gastrointestinal AE's
Cardiovascular Effects	Palatin structure-function studies have identified achievable modifications which eliminate cardiovascular effects

PALATIN

Novel "Next Generation" MC4R Selective Peptide Agonists

First series of 'next generation' MC4R peptide agonists for obesity:

- Palatin studies in MC4R knock-out model confirm weight loss is dependent on a functional MC4R
- PL8905 potential lead development candidate
  - Selective MC4R agonist: Significant multiples of binding selectivity for MC4R over MC1R
  - Protein binding tail added for extended duration
  - Efficacy in weight loss and food intake at without blood pressure effects
  - Confirms validity of structure/function relationships
    - ✓ New compounds extend the selectivity for MC4R over MC1R

Second series of 'next generation' MC4R peptide agonists for obesity:

- Palatin has generated novel structures/compounds that bias for MC4R selectivity over MC1R
  - **Extended *in vivo* stability allows for 1x weekly dosing**
  - **Hyperpigmentation minimized**

PALATIN

Novel "Next Generation" MC4R Selective Peptide Agonists

Second series - new Palatin peptide compounds reduce/eliminate MC1R agonism

Agonist	MC1R EC50 (E_{max})	MC4R EC50 (E_{max})	MC4R Selectivity[a]
Bremelanotide	0.23 nM (91.8%)	5.01 nM (91.0%)	0.05
Setmelanotide	0.4 nM (106%)	0.66 nM (98.8%)	0.61
PL8905	30.2 nM (78.5%)	4.99 nM (88.3%)	6.05
2	199.6 nM (98.8%)	2.99 nM (107.4%)	66.76
3	69.1 nM (89.9%)	0.74 nM (94.9%)	93.38
4	352.3 nM (32.5%)	9.69 nM (90.5%)	Undefined[b]

- MC1R agonism results in skin darkening
- Bremelanotide is FDA approved for treating hypoactive sexual desire disorder in women
- Setmelanotide is FDA approved for treating several orphan obesity indications

[a]Selectivity is defined as ratio of MC4R EC_{50} to MC1R EC_{50} (larger # is more MC4R relative to MC1R)

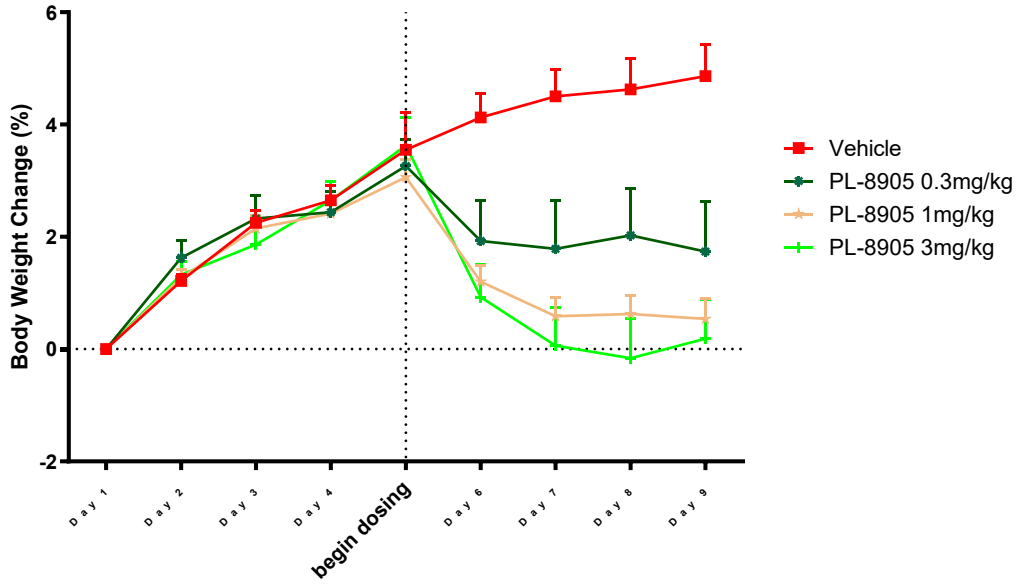
[b]Undefined indicates that the compound is not an agonist at MC1R

PALATIN

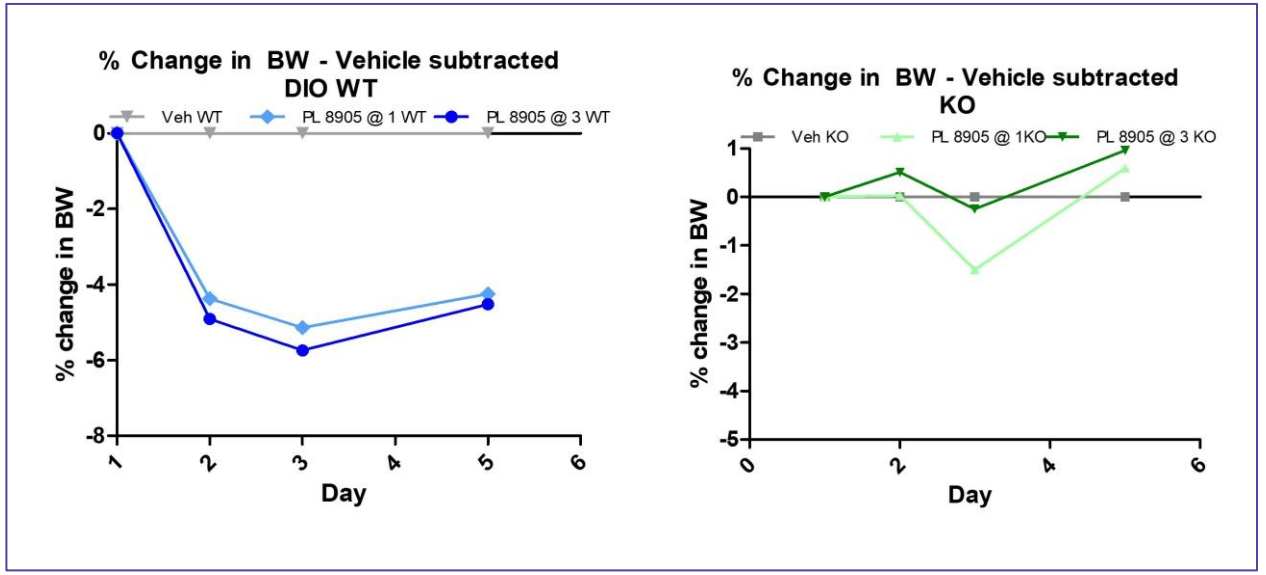
Novel "Next Generation" MC4R Selective Peptide Agonists

In vivo PL8905 weight loss studies in diet-induced obese (DIO) and MC4R knockout (KO) mice

Change in Body Weight



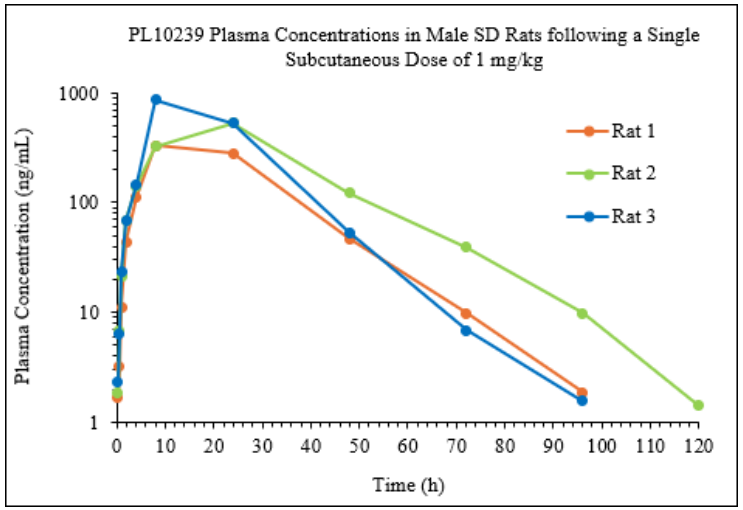
Body Weight in Wild Type DIO Mice and MC4R-Knockout Mice

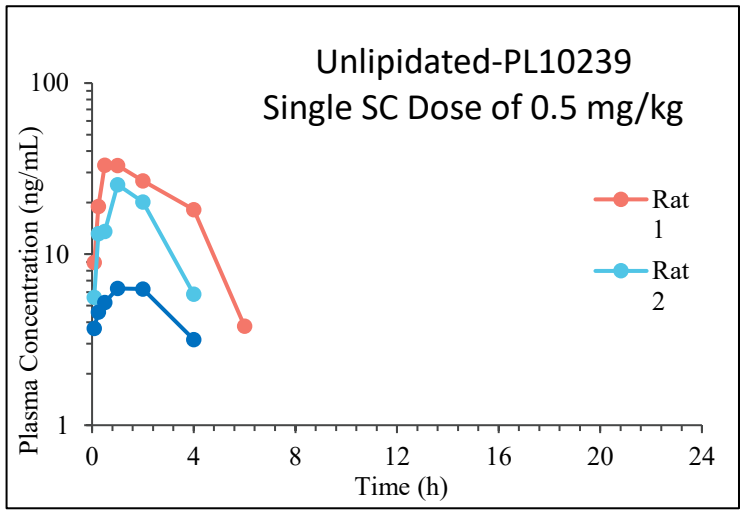


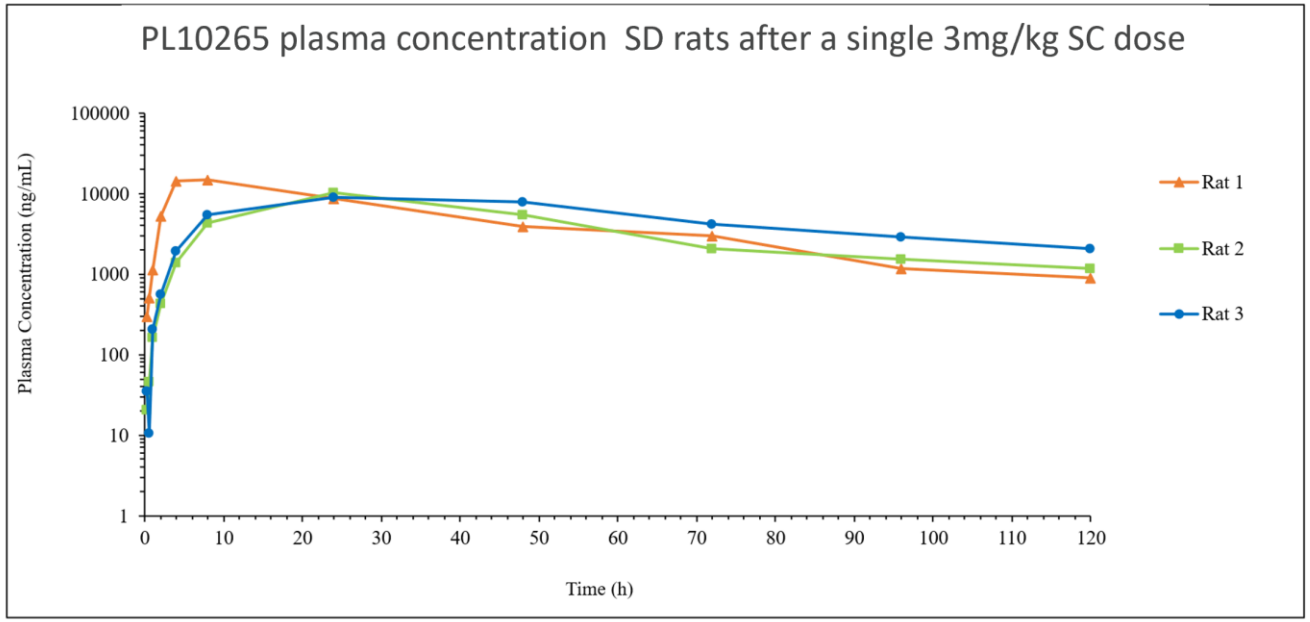
PALATIN

Novel "Next Generation“ MC4R Selective Peptide Agonists

Proprietary technology for extending peptide PK







- Proprietary technology for extending peptide pk
- Allows for additional patent protection
- Allows for once weekly dosing

PALATIN

Novel "Next Generation“ MC4R Selective Peptide Agonists

Current/Planned activities – long-acting once weekly administration SC peptides

Highly selective MC4R agonsits to avoid hyperpigmentation, no blood pressure effects and enabling once weekly injection into one compound accomplished

- Multiple candidates being profiled for receptor selectivity, PK analysis and efficacy in obesity models
- Novel intellectual property with full term patent coverage
- Final development candidate will be selected based on superior profile
  - High selectivity for MC4R over MC1R
    - Potential to eliminate hyperpigmentation
  - PK that supports ≥1 week dosing
  - Excellent weight loss in obesity models
- IND enabling studies planned for 1H 2026
- IND submission planned for mid-2026
- Phase 1 SAD/MAD 2H 2026

PALATIN

Melanocortin-4 Receptor (MC4R) Obesity Programs

Obesity program next steps

Treating general obesity & rare obesity indications: primary focus on hypothalamic obesity (HO).

Development Timeline

- MC4R agonists:
  - PL7737 oral (daily) small molecule
  - Long-acting peptide (weekly SC administration)
- **IND submissions planned 1H26 and mid-2026**
- Phase 1 SAD/MAD clinical study initiation expected 1H 2026 / **Topline data target 2H 2026**
  - Hypothalamic obesity patients will be included in Phase 1 program
- Phase 2 clinical study initiation (HO patients only) targeted for 1H 2027

Strategic Opportunity in Hypothalamic Obesity

- Clinically validated mechanism for safe, effective treatment of obesity
- Significant unmet need
- MC4R is a validated target
- Potential best-in-class MC4R oral and long-acting peptide therapies

PALATIN

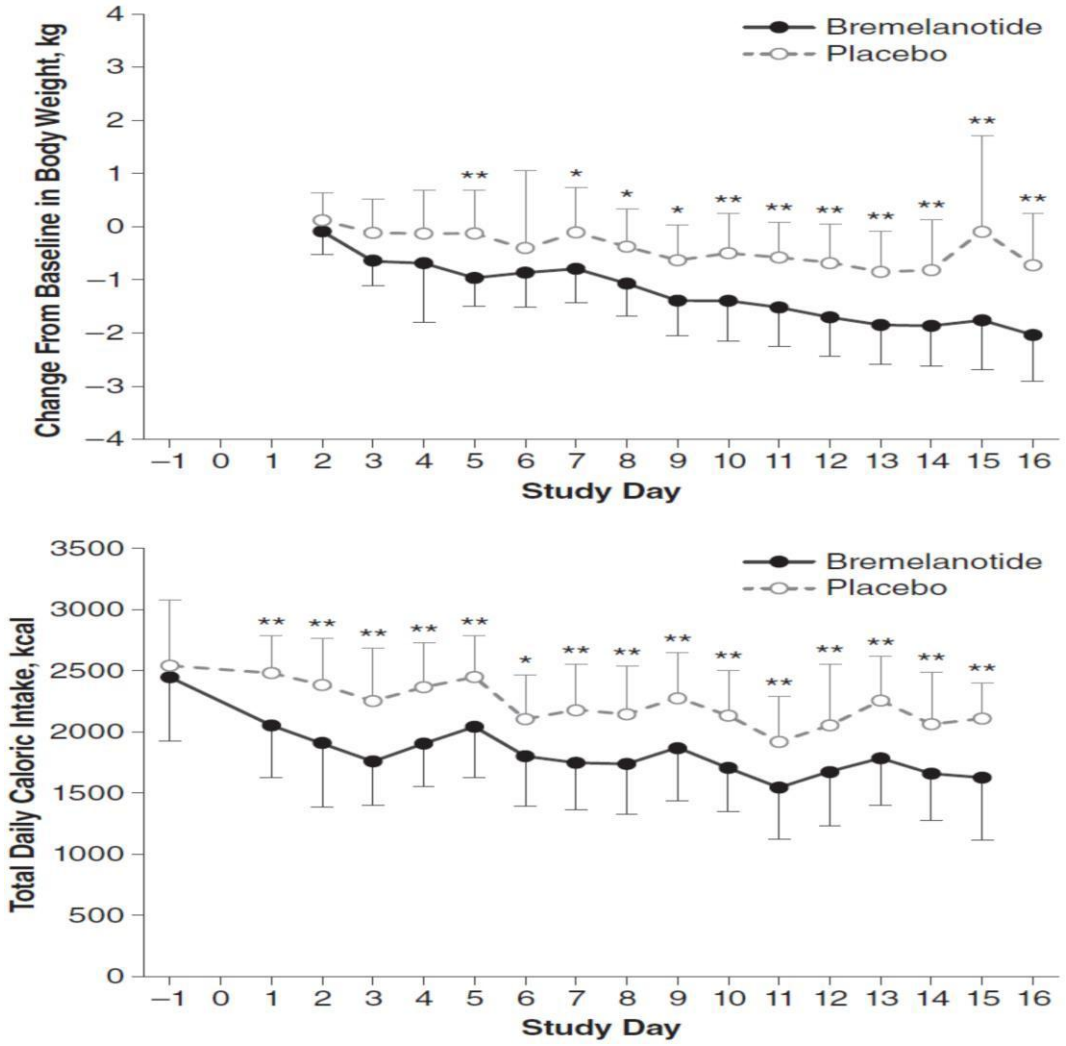
MC4R Agonist Generalized Obesity Management

- *Bremelanotide MC4R agonist Phase 1b clinical weight loss study in general obese subjects*
- *Co-administration of Bremelanotide MC4R & Tirzepatide (GLP-1/GIP)*
  - *Bremelanotide (BMT) MC4R Agonist*
    - ✓ *FDA Approved (Vyleesi® for Female HSDD)*

PALATIN

MC4R Agonist Generalized Obesity Management

Bremelanotide MC4R agonist obesity Phase 1b clinical weight loss study in general obese subjects



2-Week Study

- General obese subjects: BMI ~35
  - Bremelanotide: n=27
  - Vehicle: n=26
- Weight loss:
  - Placebo -0.7kg;
  - Bremelanotide: -2.2kg $p<0.001$
- Bremelanotide reduction daily caloric intake ~400kcal $p<0.01$
- Steady weight loss over the duration of treatment

PALATIN

MC4R Agonist Generalized Obesity Management

*GLP-1/GIP agonist + MC4R agonist: co-administration clinical data**

- No prospective studies have been done with combination pharmacotherapy
- Previously published combination of setmelanotide plus 2.5mg of tirzepatide for obesity in BBS
- 2 patients lost 26% in 34 weeks and 30% TBW at 52 weeks never moving past 2.5mg dose

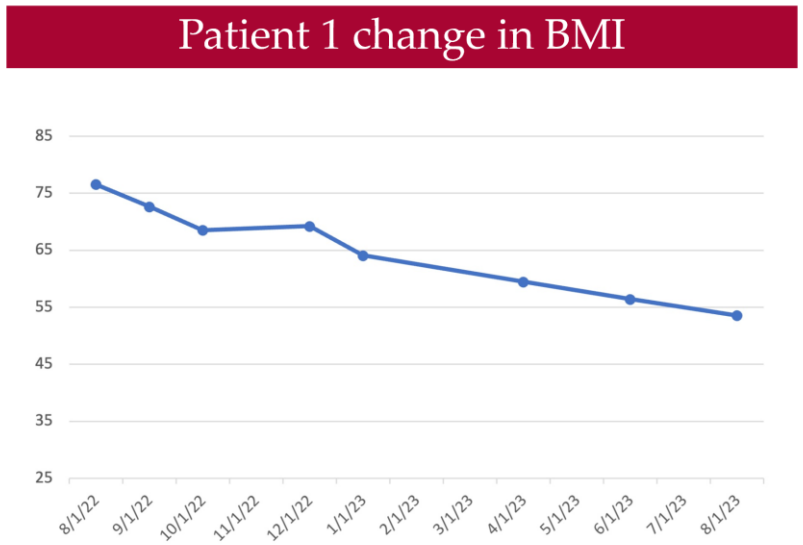


Image 1: Rate of change of BMI in Patient 1 taking combination therapy over a 52-week period.

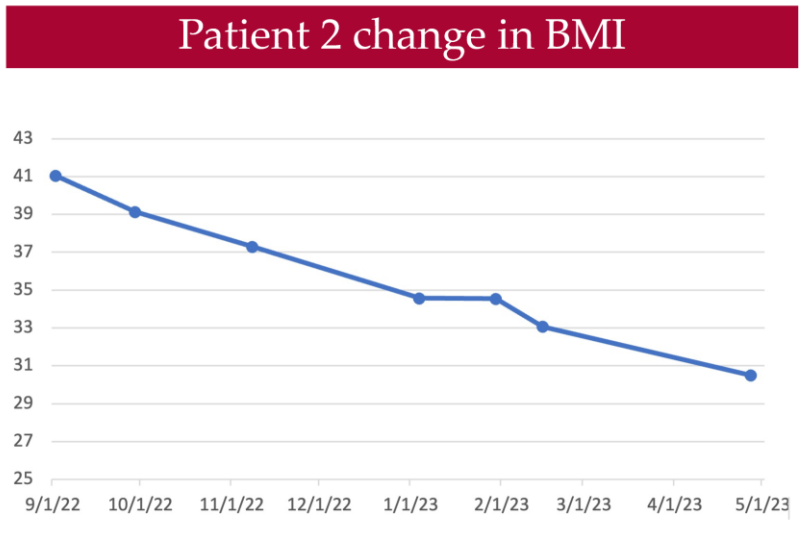

Image 2: Rate of change of BMI in Patient 2 taking combination therapy over a 34-week period.

*McCorkle, C. et. al. Poster Obesity Week 2024 Dallas, TX

PALATIN

MC4R Agonist Generalized Obesity Management

BMT-801 Phase 2 signal detection study objectives

Co-Administration GLP1/GIP Agonist Tirzepatide (2.5mg Weekly) + MC4R Agonist Bremelanotide (1.25mg Daily)

Main Research Questions

- Does co-administration result in increased weight loss?
- Does MC4R agonism blunt the weight regain seen post-incretin treatment?
- Evaluate the safety and tolerability of co-administration

Pro's

- Appropriate control arms included
- Co-administration arm powered to see a statistically significant weight loss effect
- Evaluating a comprehensive set of secondary end points

Limitations

- MC4R agonist given at a low dose 1x day in the morning
- Not powered for between arm comparisons
- Short duration of treatment

Combination therapy will be an important approach in helping many subjects reach their weight loss goals

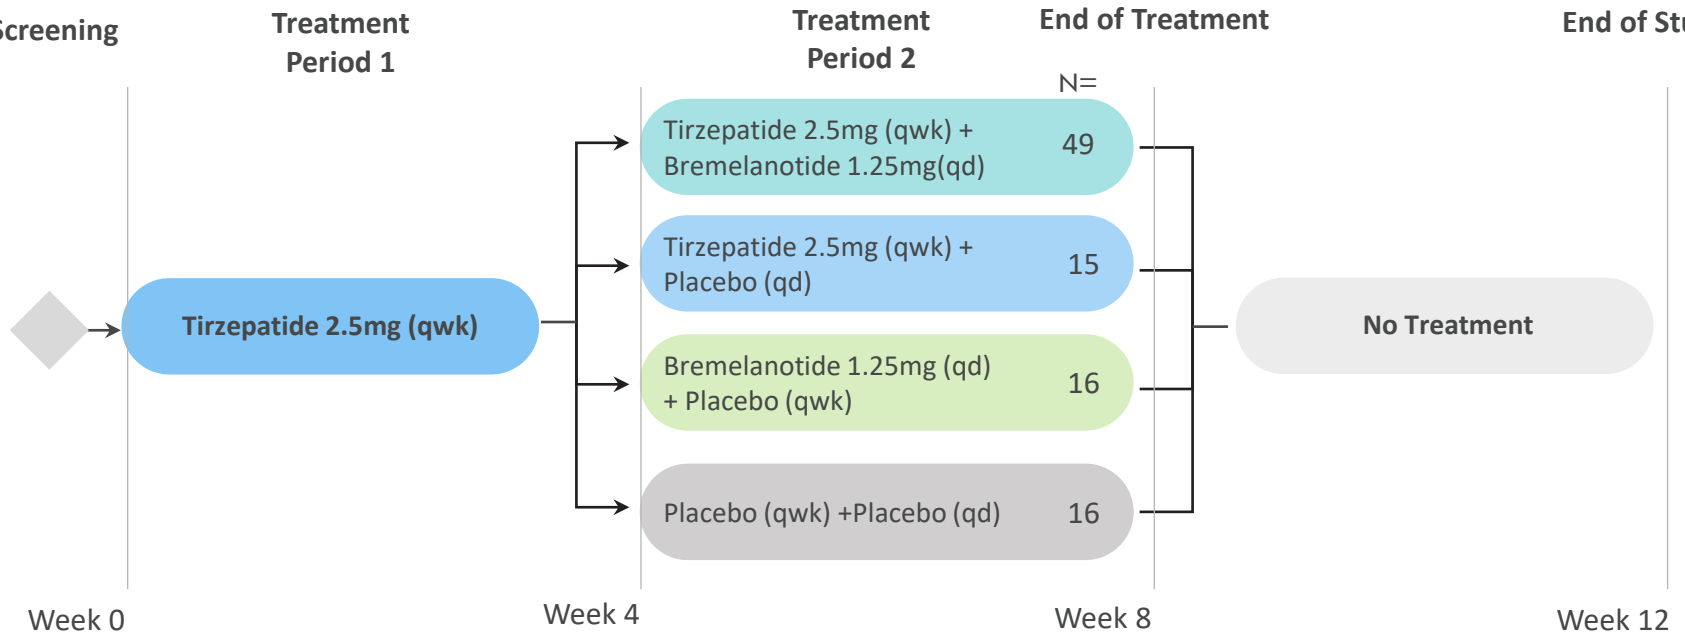
PALATIN

MC4R Agonist Generalized Obesity Management

BMT-801 Phase 2 signal detection study

Co-Administration GLP1/GIP Agonist Tirzepatide & MC4R Agonist Bremelanotide

Study Design: Randomized, double-blind, placebo-controlled trial evaluating the safety and efficacy of the addition of an MC4R agonist (BMT) to tirzepatide in n=96 obese subjects



Primary endpoint: % change in weight loss tirzepatide/bremelanotide compared to pbo/pbo at week 8

Additive effect of BMT: % of subjects with ≥5% weight loss at week 8 tirzepatide/bremelanotide compared to tirzepatide/pbo
% subjects greater weight loss in Treatment Period 2 vs Treatment Period 1, tirzepatide/bremelanotide compared to tirzepatide/pbo
% change in weight loss tirzepatide/bremelanotide compared to tirzepatide/pbo Treatment Period 2 (week 4–week 8)

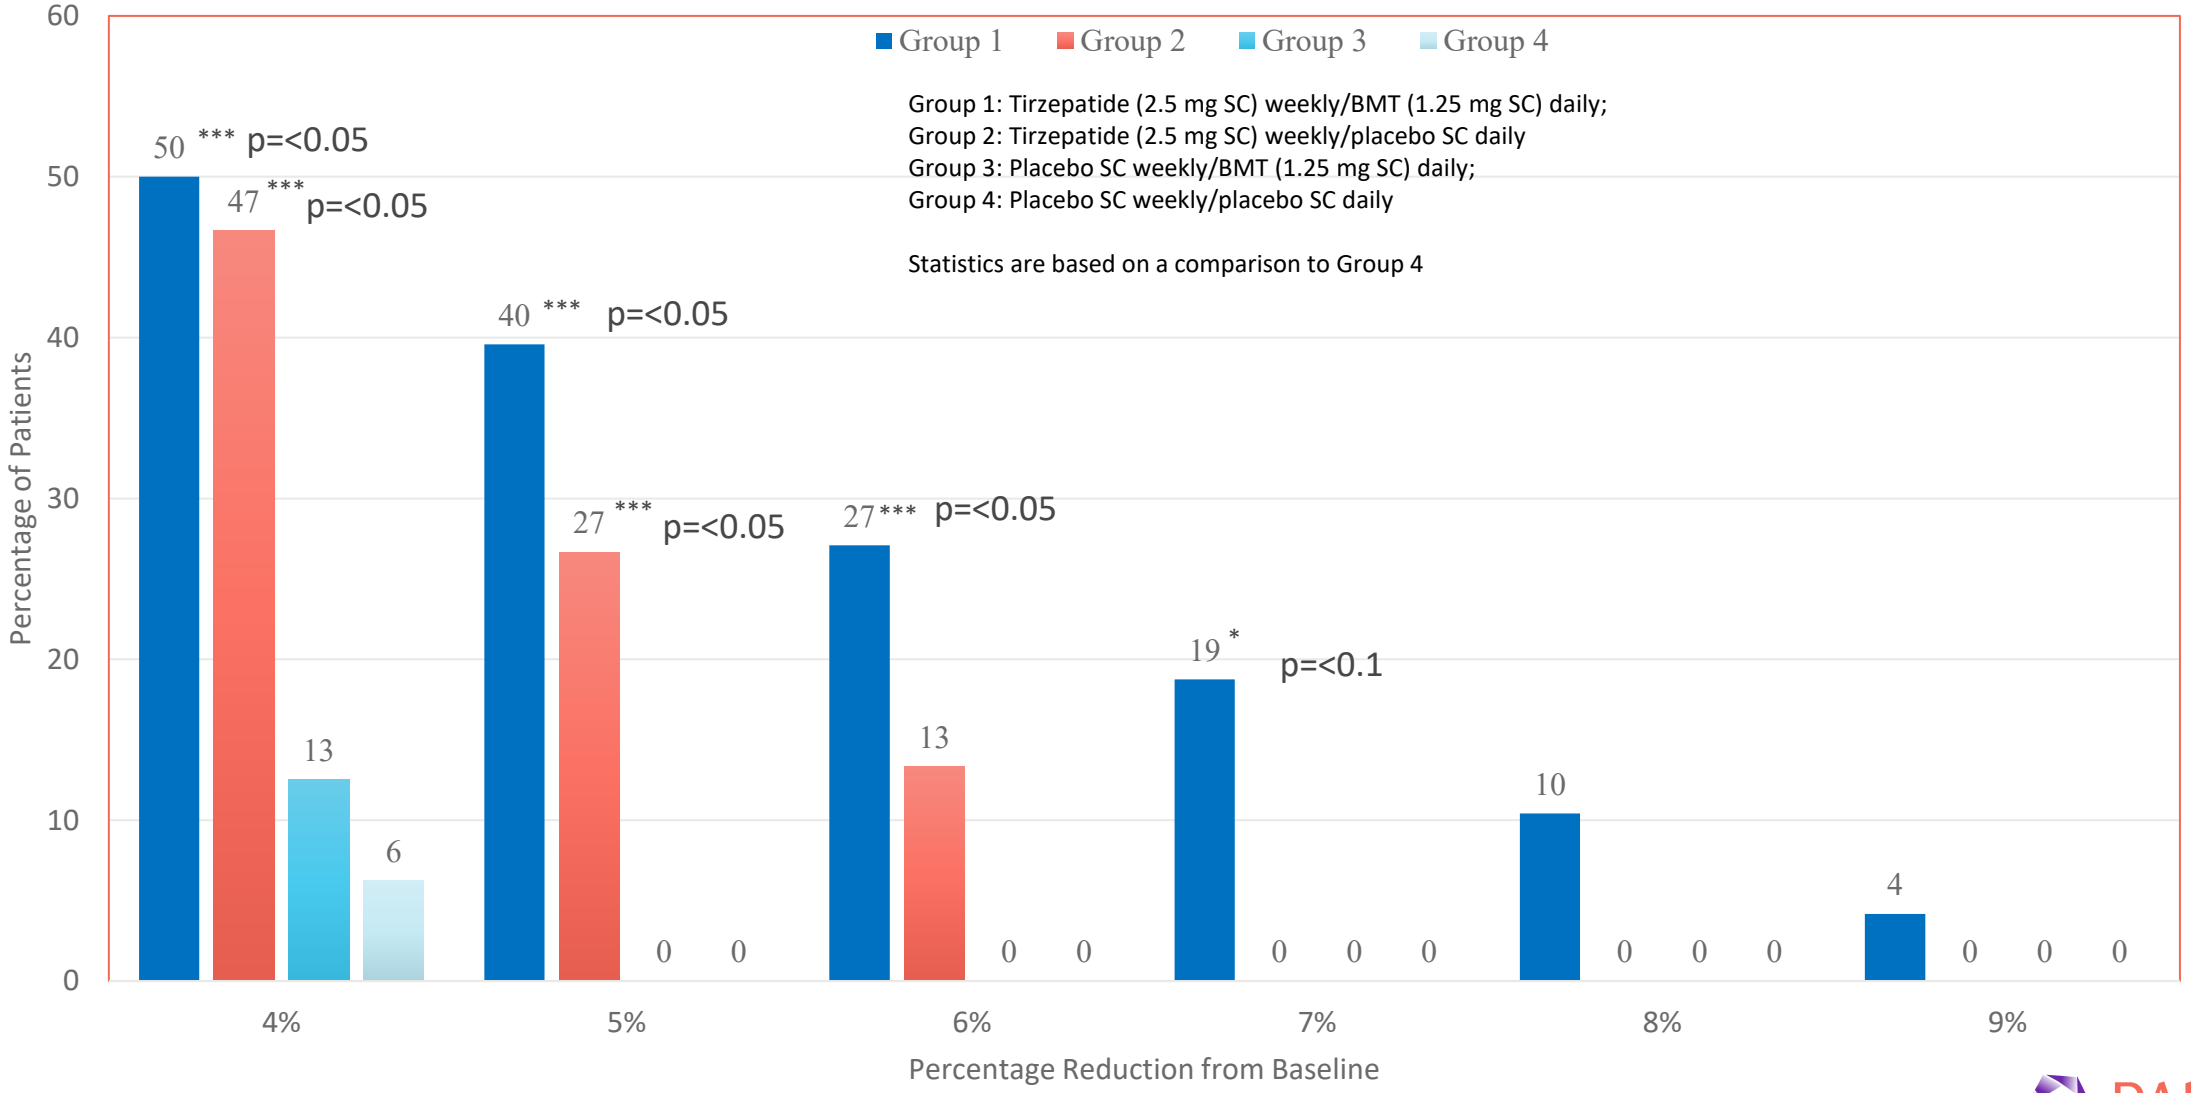
Weight loss maintenance: % change weight loss bremelanotide/pbo vs pbo/pbo (week 4-week 8)

PALATIN

MC4R Agonist Generalized Obesity Management

Co-administration additive effect – primary analysis

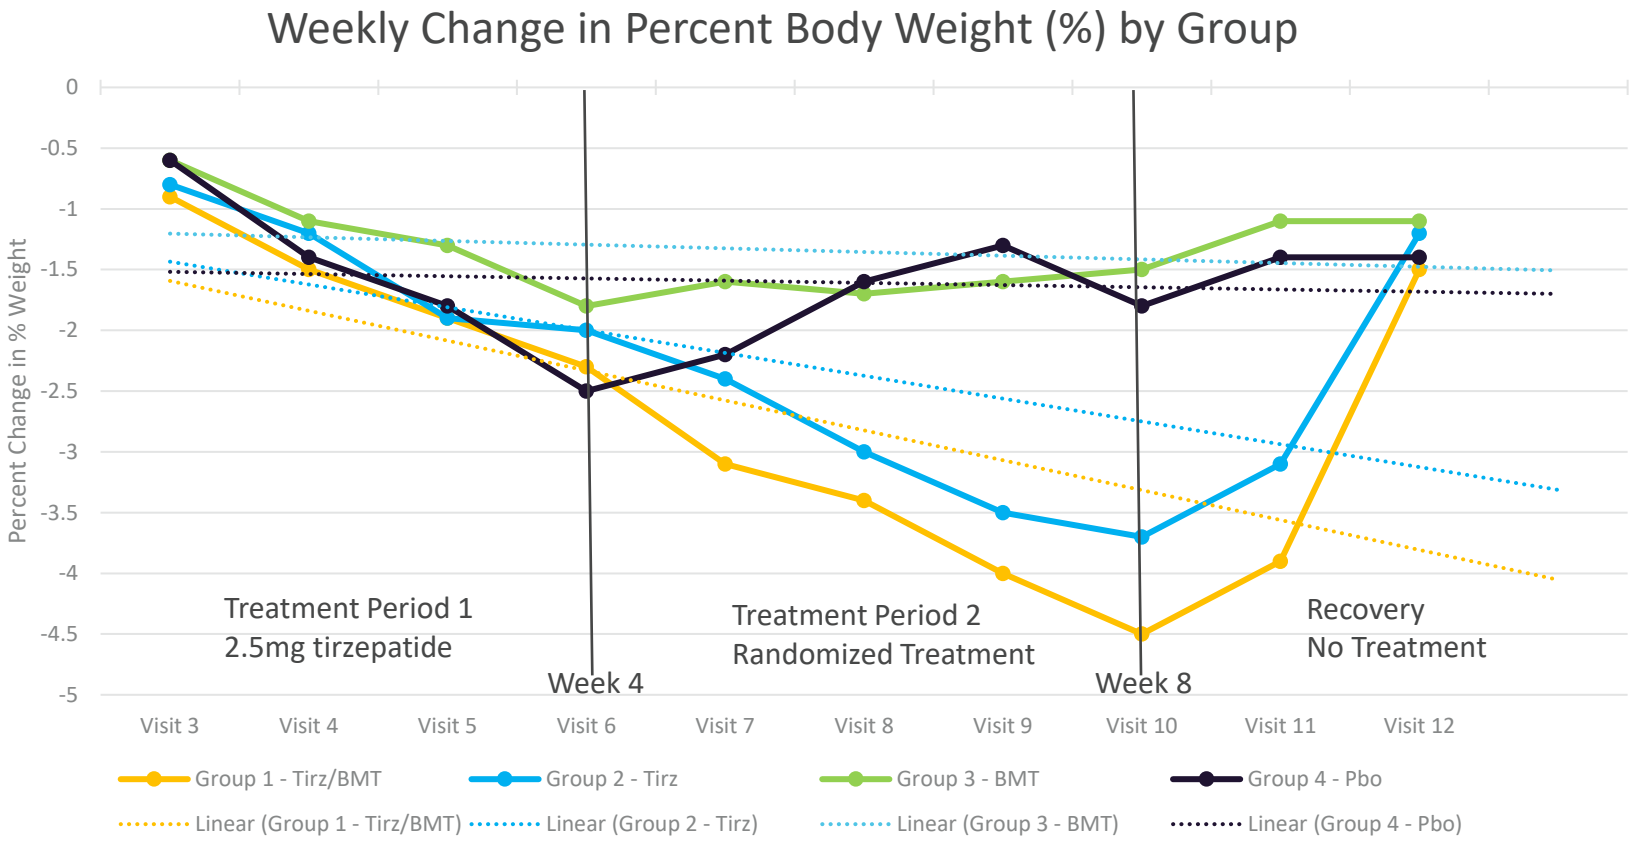
Analysis for Additive Effect Percent of Subjects with ≥4% Reduction in Percent Weight Loss at End of Study



PALATIN

MC4R Agonist Generalized Obesity Management

Effect of co-administration on increased weight loss



- Comparison of Group 4 to Group 3 during Treatment Period 2 demonstrates a **weight loss maintenance effect**
- Comparison Group 1 to Group 2 at week-8 demonstrates **additive effect of co-administration**
- **Rapid weight regain seen post-treatment**

PALATIN

MC4R Agonist Generalized Obesity Management

BMT-801 MC4R/GLP-1-GIP co-administration detection study

Value of the study results and next steps

Confirmation that **MC4R treatment with GLP-1/GIP can be additive without increasing safety and tolerability issues**

BMT-801 Study

Provided **valuable dosing information for future, new development compounds**

Support to **perform co-administration study early** in development with new compounds for optimal safety & efficacy plus broad label

BMT-801 data **supports the use of an MC4R for weight loss maintenance**

Proprietary MCr Agonists for Treating Retinal Diseases and Glaucoma

Research Collaboration / License Agreement with Boehringer Ingelheim August 2025

Boehringer Ingelheim and Palatin to develop potential first-in-class melanocortin receptor targeted treatment for patients with retinal diseases.

- Collaboration strengthens Boehringer's pipeline in Eye Health.
- Many patients with diabetic retinopathy (DR) continue to experience vision loss or treatment fatigue, underscoring an unmet need.
- Melanocortin receptor agonists offer a promising, differentiated mechanism that targets key drivers of retinal diseases, including DR.

- Upfront payment of €2.0 million ($2.3 million USD).
- Up to €18.0 million ($20.9 million USD) in near-term research milestone payments.
- Up to €260 million ($301.6 million USD) in success-based development, regulatory, and commercial milestone payments.
- Tiered royalties on net commercial sales of Products.

Boehringer Ingelheim

- DR, including diabetic macular edema (DME), **affects one in three people with diabetes** and is the **leading cause of blindness in working-age people**.
- Studies suggest that **patients with DME face 30-50% higher healthcare costs than those with diabetes alone**, underscoring the need for new approaches that mitigate the necessity of long-term, intensive care that often requires frequent monitoring and specialized procedures.
