Palatin Technologies, Inc.

NYSE American: PTN

CORPORATE PRESENTATION

April 2025

Carl Spana, Ph.D.
President & CEO

Stephen T. Wills, CPA/MST
CFO / COO

Forward Looking Statements

The statements in this presentation that relate to future plans, events or performance are forward-looking statements, which are made pursuant to the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended. Such forward-looking statements involve significant risks and uncertainties, and actual results, events and performance may differ materially from those expressed or implied in this presentation. We have based these forward-looking statements largely on our current expectations and projections about future events and financial trends that we believe may affect our financial condition, results of operations, business strategy and financial needs. These forward-looking statements include, but are not limited to, statements concerning the following: (i) estimates of our expenses, future revenue and capital requirements; (ii) our ability to obtain additional funding on terms acceptable to us, or at all; (iii) our ability to advance product candidates into, and successfully complete, clinical trials; (iv) the initiation, timing, progress and results of future preclinical studies and clinical trials, and our research and development programs; (v) the timing or likelihood of regulatory filings and approvals; (vi) our expectation regarding timelines for development of our other product candidates; (vii) the potential for commercialization of our other product candidates, if approved for commercial use; (viii) our ability and the ability of our licensees to compete with other products and technologies similar to our product candidates; (ix) the ability of third party collaborators to timely carry out their duties under their agreements with us and our licensees; (x) the ability of contract manufactures to perform their manufacturing activities in compliance with applicable regulations; (xi) our ability to recognize the potential value of our licensing arrangements with third parties; (xii) the potential to achieve revenues from the sale of our product candidates; (xiii) our ability to maintain product liability insurance at a reasonable cost or in sufficient amounts, if at all; (xiv) the retention of key management, employees and third-party contractors; (xv) the scope of protection we are able to establish and maintain for intellectual property rights covering our product candidates and technology; (xvi) our compliance with federal and state laws and regulations; (xvii) the timing and costs associated with obtaining regulatory approval for our product candidates; (xviii) the impact of legislative or regulatory healthcare reforms in the United States; and (xix) other risks disclosed in our SEC filings. The forward-looking statements in this presentation do not constitute guarantees of future performance. We undertake no obligation to publicly update these forward-looking statements to reflect events or circumstances that occur after the date of this presentation.

PALATIN

Company Profile

Technology platform – validated drug development based on the melanocortin system

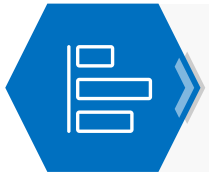
Therapeutics for Obesity, Inflammatory & Autoimmune Diseases, and Sexual Dysfunctions

Demonstrated expertise moving programs from discovery to FDA approval

Expertise in the biology and chemistry of melanocortin system (MCS)

1st company to gain FDA approval for a melanocortin agent (Vyleesi®)

MOA with potential to modify underlying disease pathologies – not just treat symptoms



Strategy leverages our expertise across multiple therapeutic opportunities

PALATIN

Palatin Leadership – Strong Team with Broad / Extensive Biopharma Experience

Carl Spana, PhD
President and Chief Executive Officer

Co-founder with 25-plus years in drug research, development, approval and board directorships

Stephen T. Wills, CPA/MST
Chief Financial Officer and Chief Operating Officer

25-plus years in finance, operations, M&A, licensing, capital markets and board directorships

John Dodd, PhD
Senior Vice President Research / Development

40-plus years in drug discovery and development

Paul Kayne, PhD
Vice President Biological Sciences

25-plus years in drug discovery and development

J. Don Wang, PhD
Vice President Product Development

30-plus years in CMC and supply chain

Stephen A. Slusher
Chief Legal Officer

30-plus years of legal leadership with a focus on Intellectual property

Robert Jordan
Senior Vice President Program Operations

20-plus years in drug development and clinical operations

James Hattersley
Senior Vice President Business Development

25-plus years of identifying and executing deals

Bristol Myers Squibb™ · SB · AR · SUN PHARMA · DERMASCIENCES A TISSUE REGENERATION COMPANY · NEKTAR · Santen · Johnson&Johnson · tolmar · Caltech · Abbott

PALATIN

Commercial Product and Development Programs

Commercial Product

Vyleesi® (bremelanotide)
Hypoactive Sexual Desire Disorder

Asset Sale for FSD Rights to Cosette December 2023

Up to $159 million in potential sales milestones

Pipeline Development Programs	Preclinical	Phase 1	Phase 2	Phase 3	NDA	Status/Next Steps
Obesity						
Bremelanotide Obesity - GLP-1 adjunct therapy						Phase 2 MC4R agonist + GLP-1 in obese patients initiated **Positive topline data reported 1Q25**
Novel Once-Weekly Peptide MC4R Agonist Multiple obesity indications						IND enabling – CMC activities 1Q25 – 4Q25 **IND filing 4Q25** **Phase 1 SAD/MAD data 1H26**
PL7737 Oral Small Molecule MC4R Agonist Multiple obesity indications						IND enabling – CMC activities 1Q25 – 4Q25 **IND filing 4Q25** **Phase 1 SAD/MAD data 1H26**
Spin-Out / Out-License Product Candidates - Seeking Development & Commercial Partnerships (investment bank engaged to support process)						
Ocular						
PL9643 MCR Agonist Dry eye disease (DED)						Phase 3 MELODY-1 completed, positive data FDA confirmation on protocols and endpoints **Phase 3 Melody-2 & -3 start targeted for 2H25**
PL9588 MCR Agonist Glaucoma						**IND filing 2H25** Clinical program initiation / data 1H26
PL9654 MCR Agonist Retinal diseases						IVT delivery activities advancing / **Topical delivery planned**
Gastroenterology, Men's Health, Renal						
PL8177 Oral MC1R Agonist Ulcerative colitis (UC)						Phase 2 Proof-of-Concept **Positive topline data reported 1Q25**
Male Sexual Dysfunction **Bremelanotide + PDE5i** PDE5i non-responders						Clinical co-formulation program initiated PK Study data target 2H25 **Phase 2/3 initiation 1H26**
MCR Agonist Diabetic nephropathy						Phase 2 Open Label Trial **Positive topline data reported 4Q24**

PALATIN

Melanocortin-4 Receptor Obesity Management

- Co-administration of Bremelanotide & Tirzepatide (GLP-1/GIP)
  - Bremelanotide (BMT) MC4R Agonist
    - ✓ FDA Approved (Vyleesi® for Female HSDD)
- Novel “Next Generation” MC4R Selective Agonists
  - MC4R Selective Peptides Once Weekly Dosing
  - Oral MC4R Selective Small Molecules

PALATIN

Emerging Obesity Treatment Landscape

U.S. market value – obesity/metabolic over $5 billion (2023) growing to $44 Billion (2030)

Two treatment objectives will define the market

- Safe, tolerable weight loss for all patients
- Long-term maintenance of a healthy weight range

Incretin based therapeutics will be standard of care

- Can drive substantial rapid weight loss
- Issues are tolerability, safety and rebound
- New mechanisms are needed to meet long term treatment goals

The Opportunity

- 2nd line monotherapy
- Co-administration with incretin therapeutics
- Weight loss maintenance

- Central Leptin-Melanocortin pathway is a critical pathway that regulates feeding and body weight to maintain energy homoeostasis
- MC4R agonist is a validated drug target for treating obesity
- MC4R agonists are additive to incretin therapeutics
- MC4R agonists counter the negative pathology which drives weight regain

MC4R agonists will be a highly valuable addition to the emerging obesity treatment landscape.

PALATIN

Review of Weight Loss Maintenance

Realizing the long-term benefits of obesity treatment

Excess body weight and fat is associated with negative health conditions

Including cardiovascular disease, diabetes, fatty liver disease, musculoskeletal disorders and some cancers

Current and next “generation” incretin based anti-obesity treatments result in significant weight loss and improved health outcomes, but for most patients, weight loss stops after 1st year

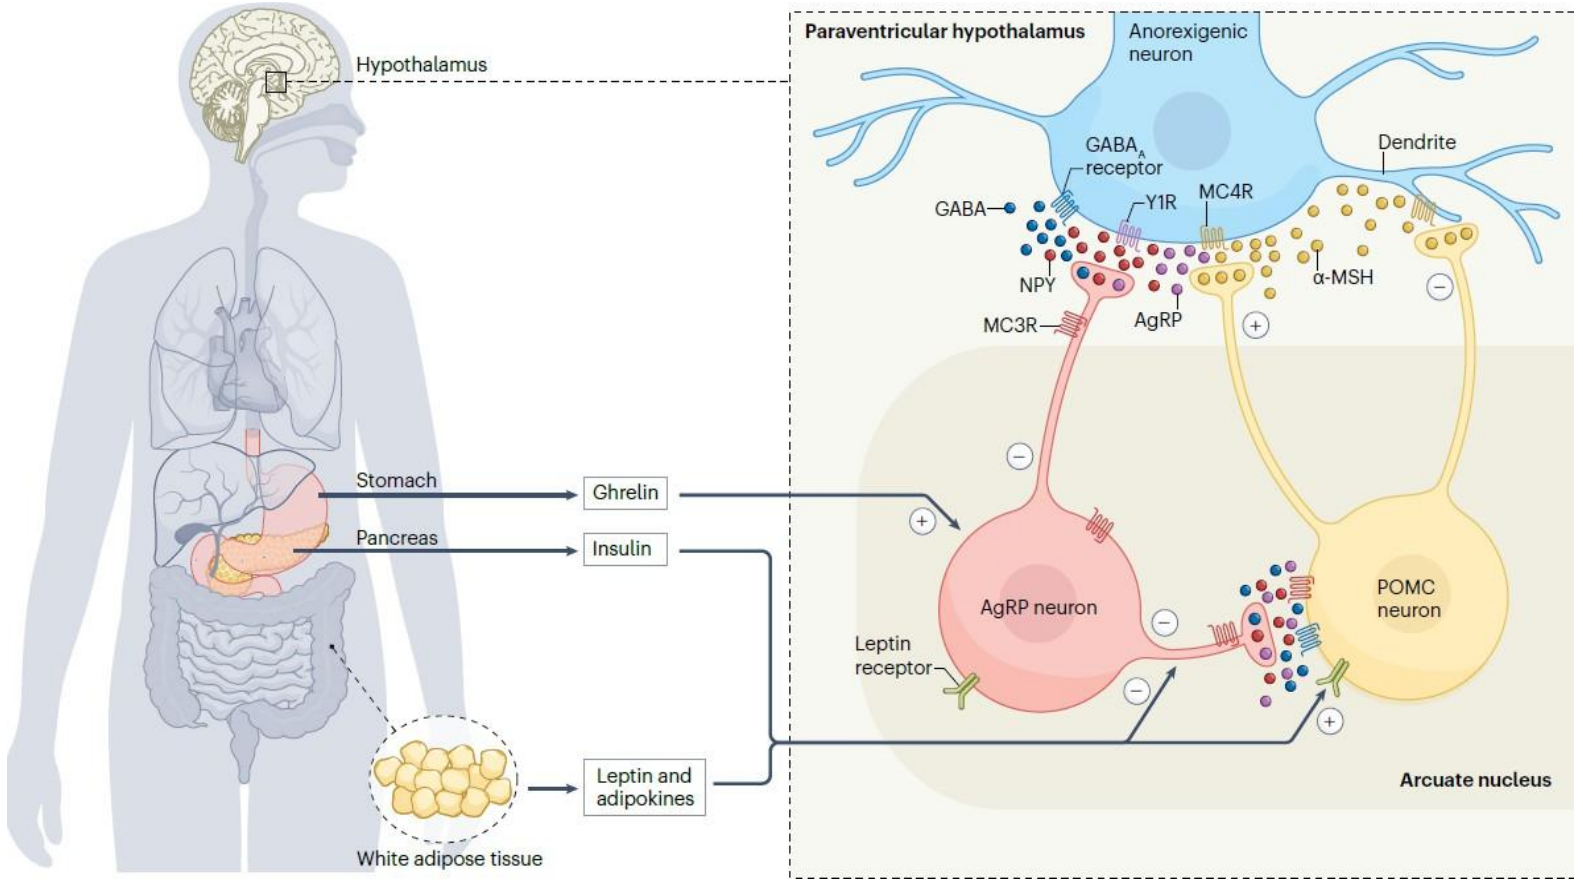
Current research indicates that persistent long-term intervention will be required to maintain a “healthy” weight reduced state and realize the benefits of anti-obesity treatment

MC4R agonism counter acts many of the metabolic, autonomic, neuroendocrine and behavioral adaptations that strongly favor weight regain

PALATIN

The Melanocortin Receptor System

Obesity and energy management



Central leptin-melanocortin pathway is a critical pathway that regulates feeding and body weight to maintain energy homoeostasis

Sweeney, P et.al. Nature Reviews Endocrinology 2023 Sep;10(9):507-519

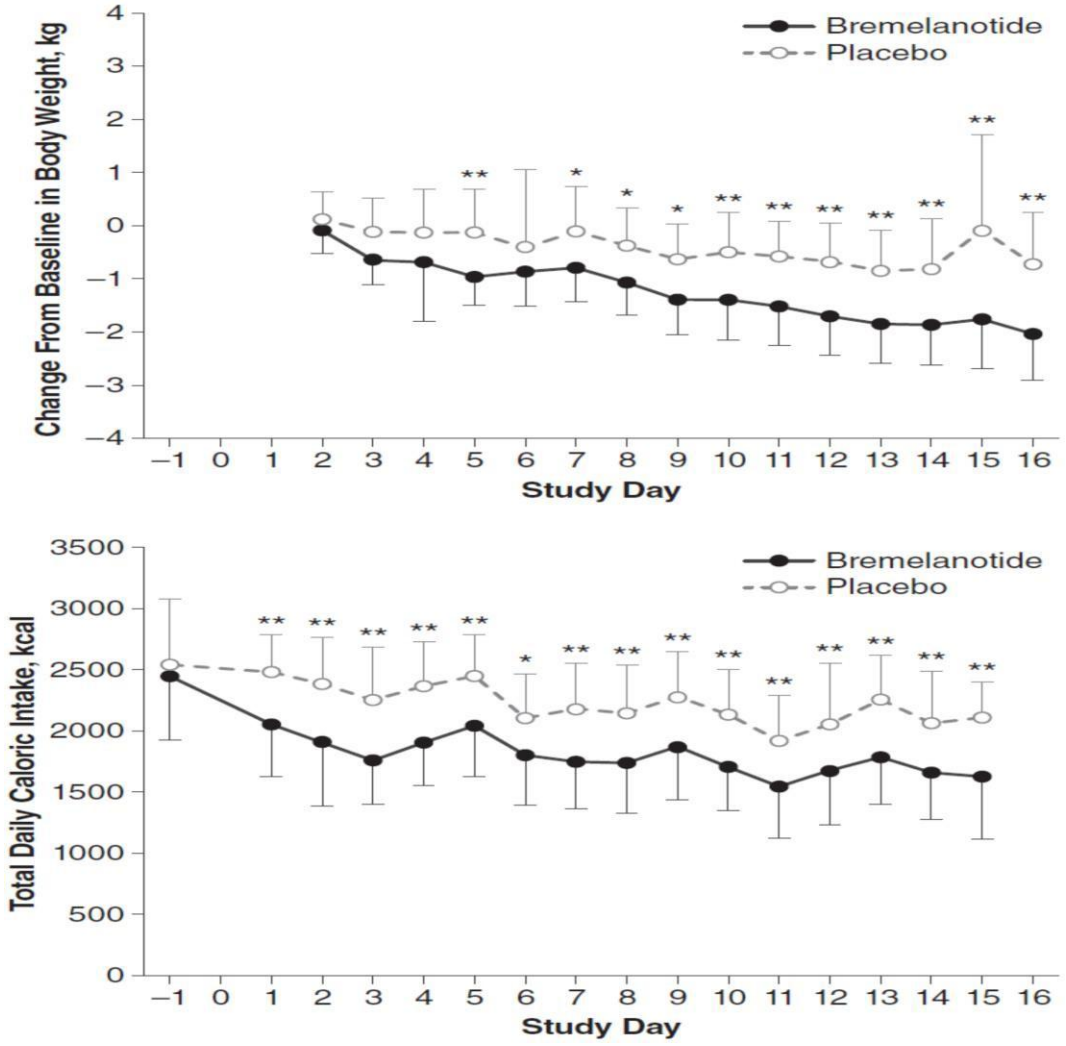
Value of Palatin's MC4R Agonist Portfolio

New mechanisms will be required for obesity therapy and weight loss maintenance	Clinically validated treatment for obesity	Bremelanotide	Novel improved "Next Gen" Selective MC4R agonists
Obesity therapy will require combination therapy to achieve consistent, robust weight loss and for the long-term maintenance of healthy weight	Central mechanism of action	FDA approved	Long duration SC peptide agonists
There are multiple high value intervention points for an MC4R agonist	Low clinical risk	Extensive efficacy and safety data	Oral small molecule agonists PL7737 lead identified
MC4R agonism is additive to GLP-1 treatments	Defined development pathways	Evaluated in obesity clinical studies	Improved safety
	Potential for high returns	Can rapidly be expanded into additional indications	Address unmet need and chronic administration
			Could be additive to current treatments

PALATIN

The Melanocortin Receptor System

Bremelanotide MC4R agonist obesity Phase 1b clinical weight loss study in general obese subjects



2-Week Study

- General obese subjects: BMI ~35
  - Bremelanotide: n=27
  - Vehicle: n=26
- Weight loss:
  - Placebo -0.7kg;
    Bremelanotide: -2.2kg p<0.001
- Bremelanotide reduction daily caloric intake ~400kcal p<0.01
- Steady weight loss over the duration of treatment

GLP-1/GIP Agonist + MC4R Agonist: Co-Administration

*Clinical data**

- No prospective studies have been done with combination pharmacotherapy
- Previously published combination of setmelanotide plus 2.5mg of tirzepatide for obesity in BBS
- 2 patients lost 26% in 34 weeks and 30% TBW at 52 weeks never moving past 2.5mg dose

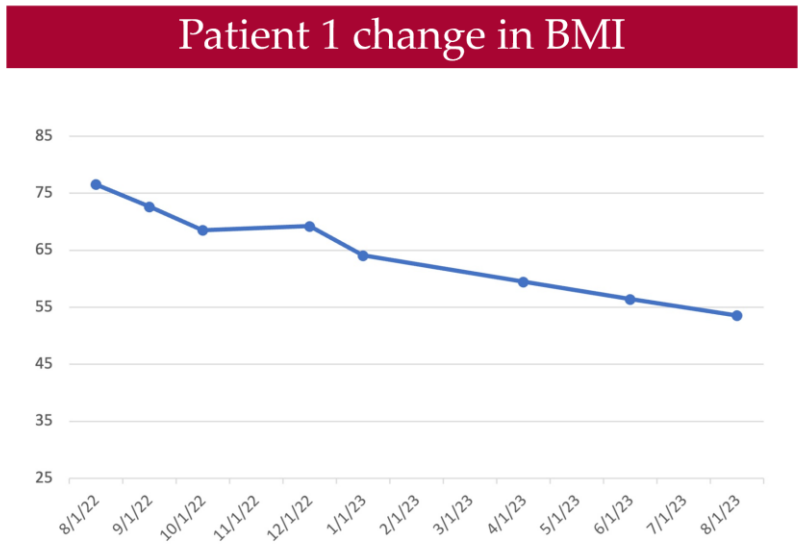


Image 1: Rate of change of BMI in Patient 1 taking combination therapy over a 52-week period.

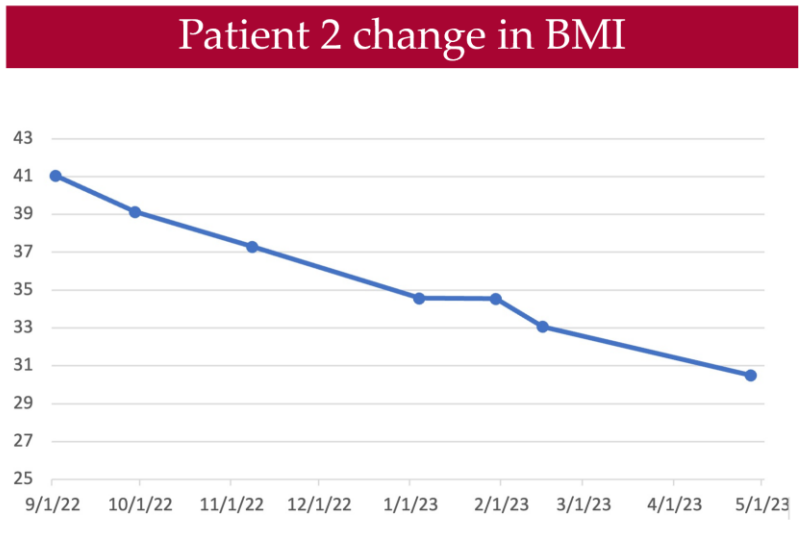

Image 2: Rate of change of BMI in Patient 2 taking combination therapy over a 34-week period.

*McCorkle, C. et. al. Poster Obesity Week 2024 Dallas, TX

PALATIN

BMT-801 Phase 2 Signal Detection Study Objectives

Co-administration GLP1/GIP agonist tirzepatide (2.5mg weekly) + MC4R agonist bremelanotide (1.25mg daily)

Main Research Questions

- Does co-administration result in increased weight loss?
- Does MC4R agonism blunt the weight regain seen post-incretin treatment?
- Evaluate the safety and tolerability of co-administration

Pro's

- Appropriate control arms included
- Co-administration arm powered to see a statistically significant weight loss effect
- Evaluating a comprehensive set of secondary end points

Limitations

- MC4R agonist given at a low dose 1x day in the morning
- Not powered for between arm comparisons
- Short duration of treatment

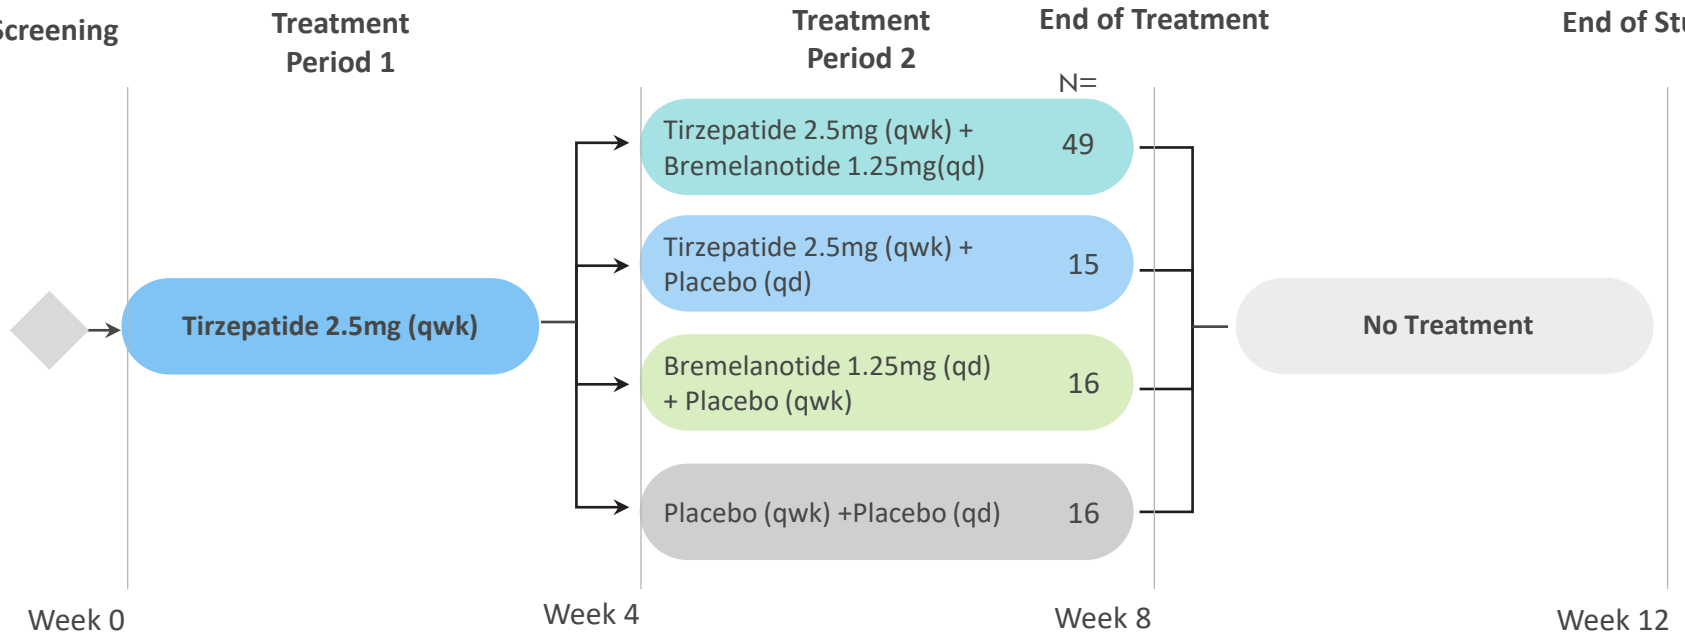
Combination therapy will be an important approach in helping many subjects reach their weight loss goals.

PALATIN

BMT-801 Phase 2 Signal Detection Study

Co-administration GLP1/GIP agonist tirzepatide & MC4R agonist bremelanotide

Study Design: Randomized, double-blind, placebo-controlled trial evaluating the safety and efficacy of the addition of an MC4R agonist (BMT) to tirzepatide in n=96 obese subjects



Primary endpoint: % change in weight loss tirzepatide/bremelanotide compared to pbo/pbo at week 8

Additive effect of BMT: % of subjects with ≥5% weight loss at week 8 tirzepatide/bremelanotide compared to tirzepatide/pbo
% subjects greater weight loss in Treatment Period 2 vs Treatment Period 1, tirzepatide/bremelanotide compared to tirzepatide/pbo
% change in weight loss tirzepatide/bremelanotide compared to tirzepatide/pbo Treatment Period 2 (week 4–week 8)

Weight loss maintenance: % change weight loss bremelanotide/pbo vs pbo/pbo (week 4-week 8)

PALATIN

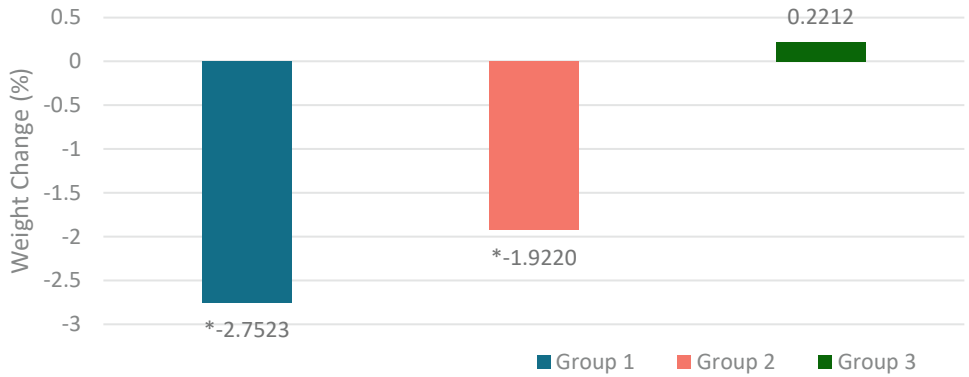
BMT-801 Patient Weight Loss from Baseline to End of Study

Primary endpoint – Co-administration group greatest weight loss

Patient Weight Change (%) from Baseline to End of Study Compared to PBO

Group	PBO/PBO	Visit	LS Mean Difference	Prob. Value
1 (n=49)	4 (n=16)	Baseline end of study	-2.7523	0.0001
2 (n=15)	4 (n=16)	Baseline end of study	-1.9220	0.0257
3 (n=16)	4 (n=16)	Baseline end of study	0.2212	0.7913

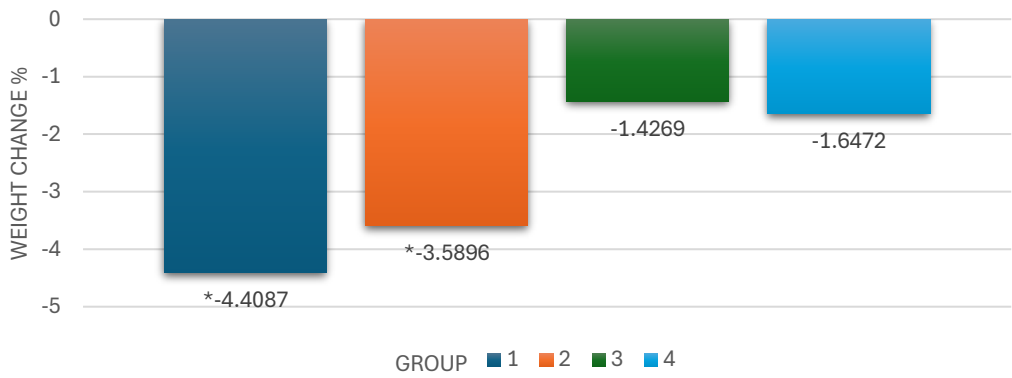
Patient Weight Change (%) from Baseline to End of Study Compared to PBO



Patient Weight Change (%) from Baseline to End of Study

Group	LS Mean	Visit	Prob. Value
1 (n=49)	-4.4087	Baseline end of study	<0.001
2 (n=15)	-3.5896	Baseline end of study	<0.001
3 (n=16)	-1.4269	Baseline end of study	0.0174
4 (n=16)	-1.6472	Baseline end of study	0.0062

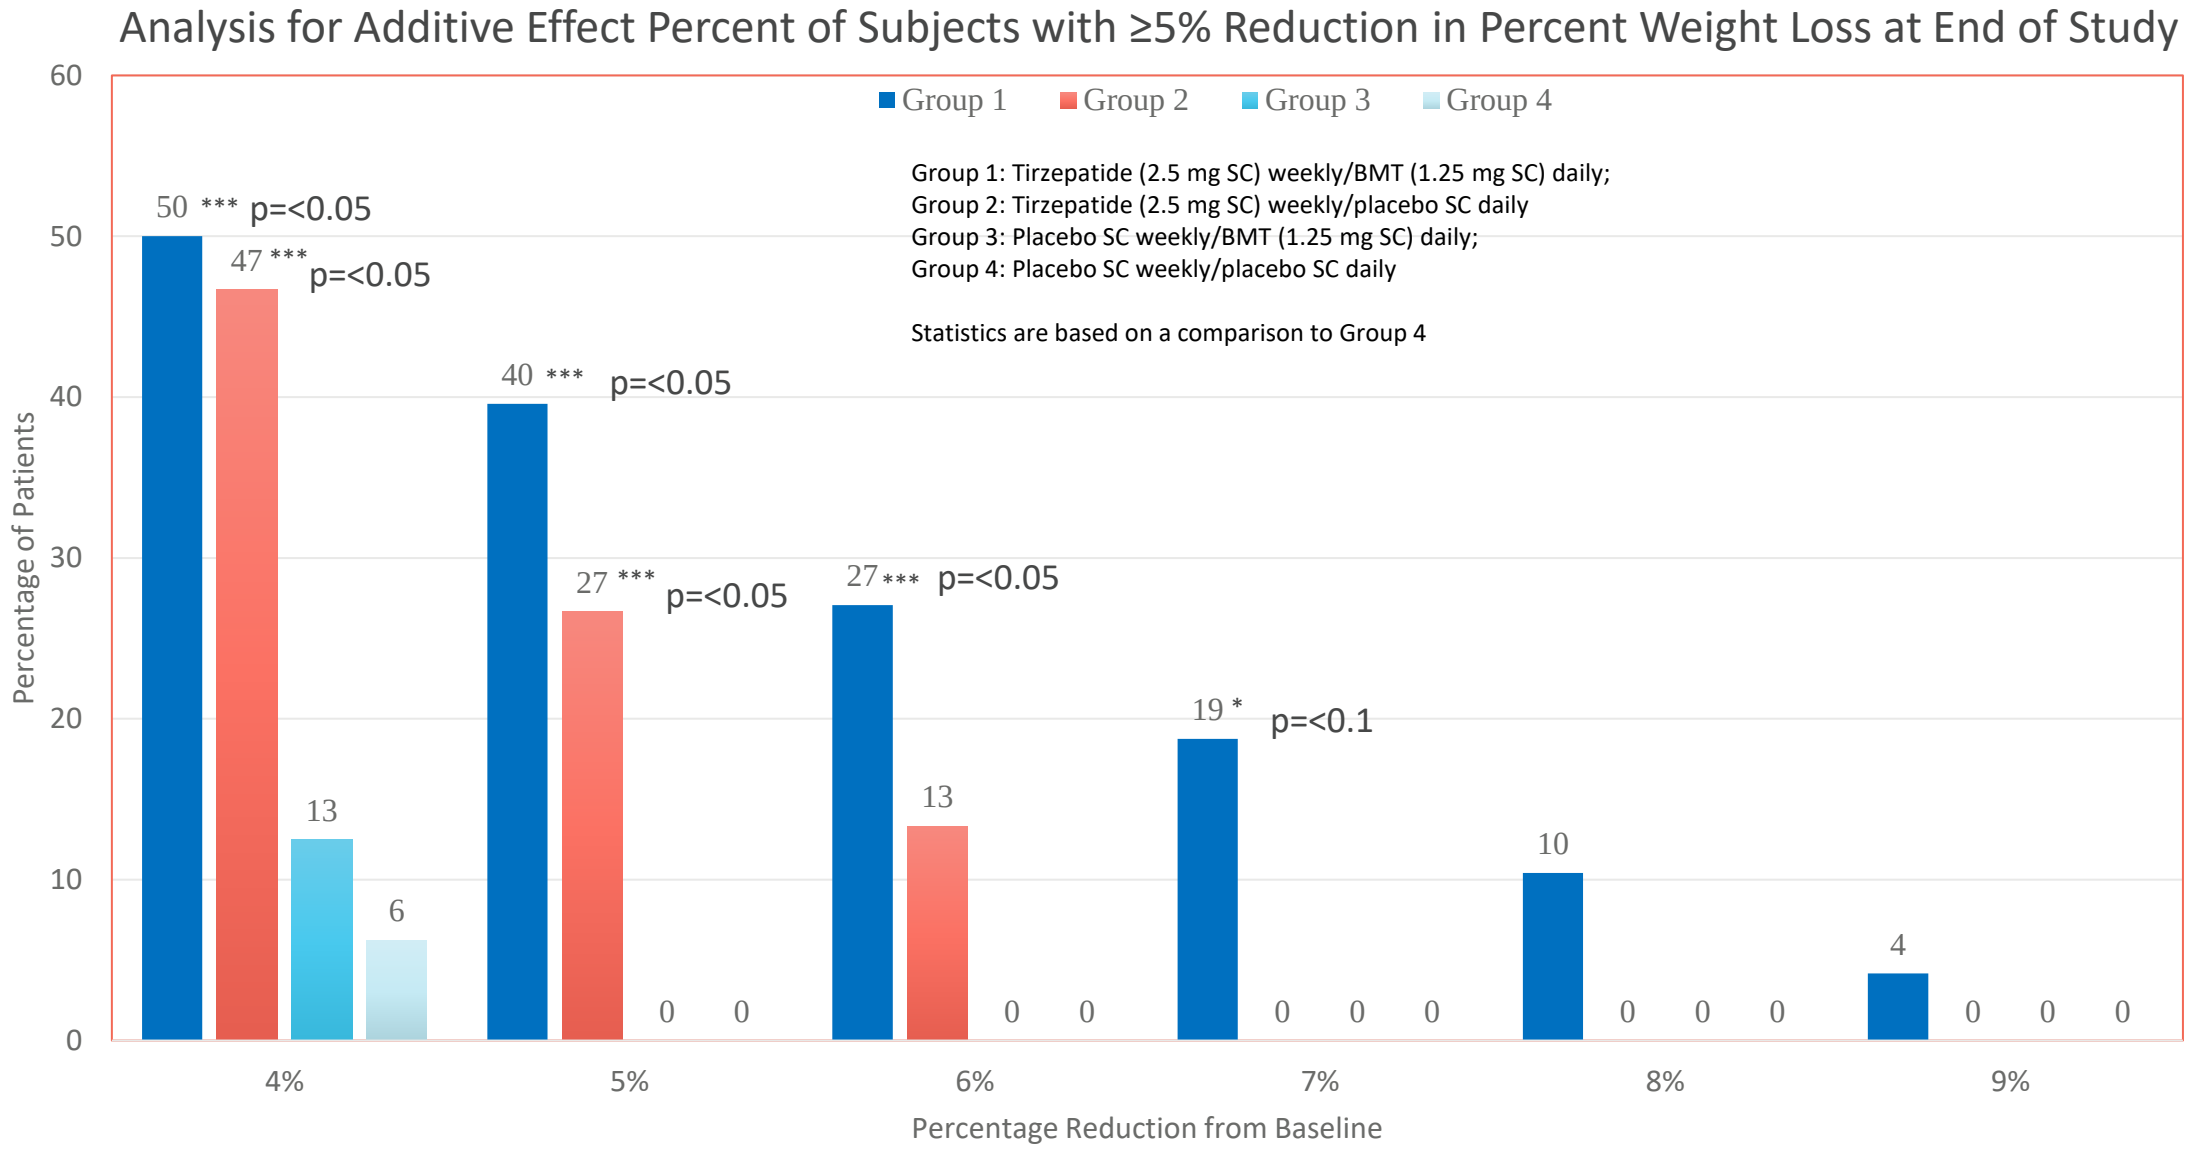
Patient Weight Change (%) from Baseline to End of Study



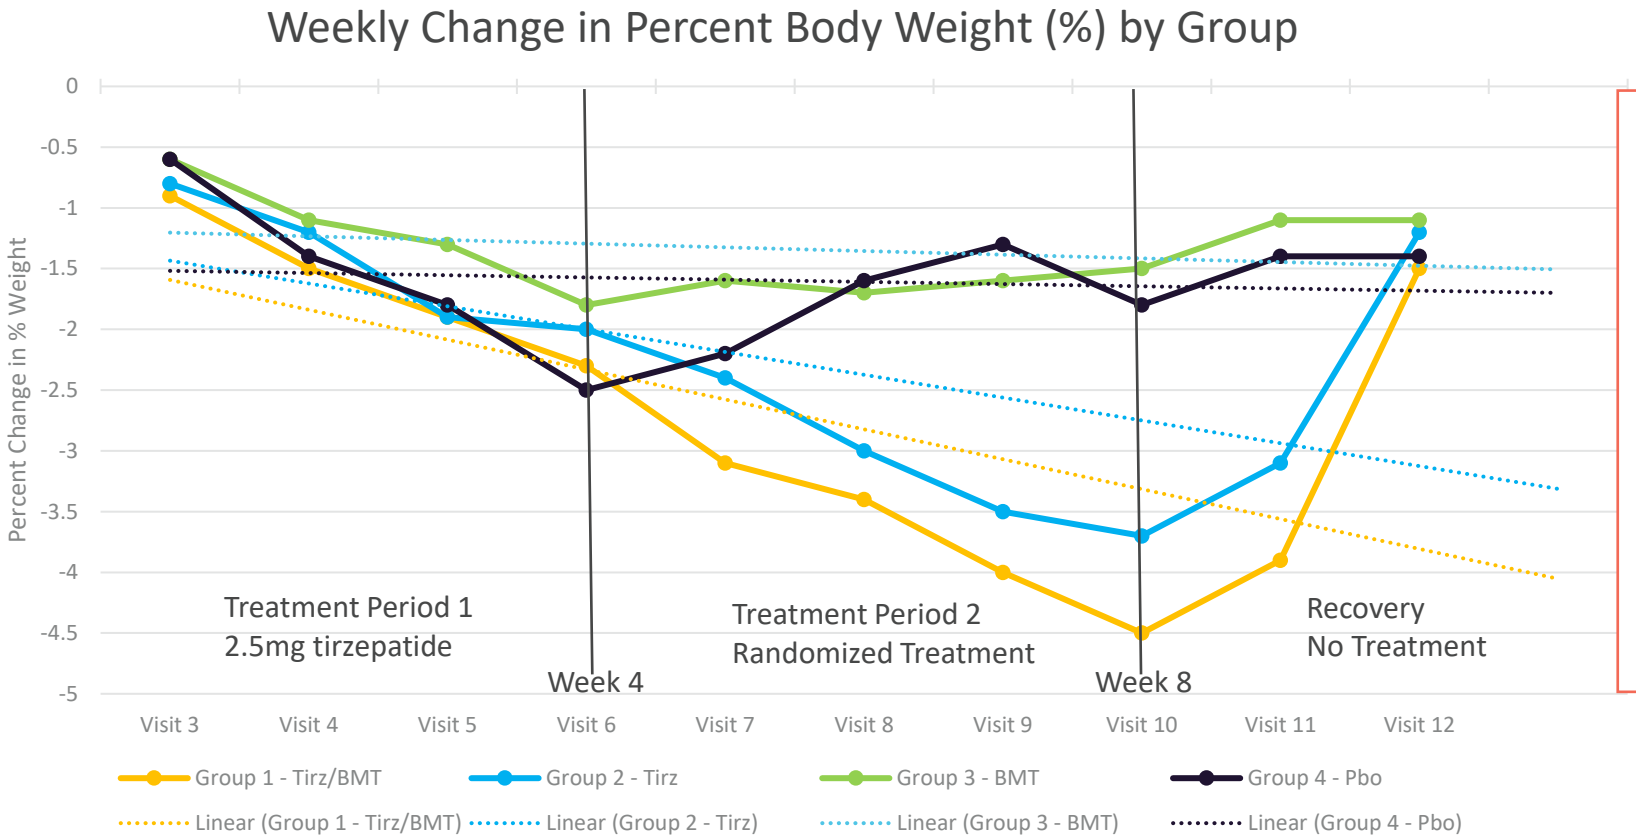
Group 1: Tirzepatide (2.5 mg SC) weekly/BMT (1.25 mg SC) daily;
Group 2: Tirzepatide (2.5 mg SC) weekly/placebo SC daily
Group 3: Placebo SC weekly/BMT (1.25 mg SC) daily;
Group 4: Placebo SC weekly/placebo SC daily

PALATIN

Co-administration Additive Effect – Primary Analysis



Effect of Co-administration on Increased Weight Loss



- Comparison of Group 4 to Group 3 during Treatment Period 2 demonstrates a **weight loss maintenance effect**
- Comparison Group 1 to Group 2 at week-8 demonstrates **additive effect of co-administration**
- **Rapid weight regain seen post-treatment**

PALATIN

BMT-801 Phase 2 Signal Detection Study Questions / Outcomes

Co-administration GLP1/GIP agonist tirzepatide (2.5mg weekly) + MC4R agonist bremelanotide (1.25mg daily)

Main Research Questions	Main Study Outcomes
1. Does co-administration result in increased weight loss?	1. YES ▪ Primary endpoint met (statistically significant) ▪ Co-administration resulted in increased weight loss
2. Any increased safety and tolerability issues with co-administration?	2. NO ▪ No increase of safety and expected tolerability observed across all treatment arms
3. Does MC4R agonism blunt the weight regain seen post-incretin treatment?	3. YES ▪ MC4R agonism blunts the weight regain seen post-incretin treatment

Combination therapy could be an important approach in helping many subjects reach their weight loss goals.

PALATIN

BMT-801 MC4R/GLP-1-GIP Co-Administration Detection Study

Value of the study results and next steps

- Confirmation that **MC4R treatment with GLP-1/GIP can be additive without increasing safety and tolerability issues**

- BMT-801 Study
  - Provided **valuable dosing information for future, new development compounds**
  - Support to perform co-administration study early in development with new compounds for optimal safety and efficacy plus broad label
  - BMT-801 data **supports the use of an MC4R for weight loss maintenance**

PALATIN

Novel “Next Generation” MC4R Selective Agonists

- MC4R selective peptides once weekly dosing
- Oral MC4R selective small molecules

PALATIN

The Melanocortin Receptor System

Legacy challenges of MC4R agonist have been solved

Current Therapy Challenges	Palatin Achieved Solutions
Injection Frequency	Palatin's compounds with high potency coupled with structural elements, extend drug residency time (≥ 1 week)
Skin Pigmentation	Multiple structural elements have been identified by Palatin and demonstrate reduced MC1R agonism (a known contributor to hyperpigmentation)
Nausea / Vomiting	Palatin research has identified multiple approaches to reduce gastrointestinal AE's
Cardiovascular Effects	Palatin structure-function studies have identified achievable modifications which eliminate cardiovascular effects

PALATIN

Novel "Next Generation" Selective MC4R Agonists

First series of 'next generation' MC4R peptide agonists for obesity:

- Palatin studies in MC4R knock-out model confirm weight loss is dependent on a functional MC4R
- PL8905 lead development candidate
  - Selective MC4R agonist: Significant multiples of binding selectivity for MC4R over MC1R
  - Protein binding tail for extended duration
  - Efficacy in weight loss and food intake at doses that do not have blood pressure effects
  - Confirms validity of structure/function relationships, new compounds are extending the selectivity for MC4R over MC1R

Second series of 'next generation' MC4R peptide agonists for obesity:

- Palatin has generated novel structures/compounds that bias for MC4R selectivity over MC1R
  - Extended *in vivo* stability allows for 1x weekly dosing

MC4R Selective Oral Small Molecule Program

Understanding what is required for success

Historically, MC4R small molecule programs have failed due to a lack of understanding the receptor biology and the structure/function relationship that determine weight loss versus side effects.

Target profile for orally active selective MC4R agonist:

- Properties required for a successful oral small molecule
  - ✓ Molecular weight
  - ✓ Polar surface area
  - ✓ hERG activity
  - ✓ Human plasma protein binding
  - ✓ CYP activity
- MC4R mechanism-based weight loss
- No MC1R activity
- No sexual or blood pressure effects
- 30-day non-GLP toxicity completed

Palatin's PL7737 has the TARGET PROFILE for a successful MC4R selective, oral small molecule entity.

PALATIN

Obesity Focused Development Programs

Multiple clinical trials targeted in 1H26 with novel, long-acting MC4R peptide and PL7737 small molecule compound for treating general obesity, weight loss management, and rare MC4R pathway diseases such as hypothalamic obesity

Product/Indication	R&D	Phase 1	Phase 2	Phase 3	NDA	Status/Next Steps
Bremelanotide (PoC Study) Obesity GLP-1 adjunct therapy						Phase 2 - tirzepatide patients **Positive Topline data reported 1Q25**
Novel Once-Weekly Peptide MC4R Agonist Multiple obesity indications						Identify optimal compound 1H25 Daily and extended dosing formats **IND enabling – CMC activities 1Q25-4Q25** **IND filing 4Q25** **Phase 1 SAD/MAD data 1H26**
PL7737 Oral Small Molecule MC4R Agonist Multiple obesity indications						**D**aily dosing format **IND enabling – CMC activities 1Q25-4Q25** **IND filing 4Q25** **Phase 1 SAD/MAD data 1H26**

PL7737 granted FDA orphan drug designation for obesity due to leptin receptor (LEPR) deficiency

Hypothalamic Obesity (HO) patients to be included in Phase 1 SAD/MAD studies.

PALATIN

Summary – Palatin's MC4R Obesity Program

Experts in the design and development of MC4R agonists

- Clinically validated mechanism for safe, effective treatment of obesity
- Mechanism addresses the negative physiology that drives weight regain
- IP, know-how and assets for the successful development of an MC4R obesity treatment
- First company to get FDA approval for an MC4R agonist (Vyleesi® approved 2019)
- 1x weekly & oral small molecule MC4R selective agonists ready to advance into development
- Multiple near-term development and clinical milestones
  - IND enabling / CMC activities 1Q25-4Q25
  - **IND filings target 4Q25**
  - **SAD/MAD Phase 1 data readout target 1H26**

Spin-Out / Out-License Programs

PALATIN

Spin-Out / Out-License Programs

Product/Indication	R&D	Phase 1	Phase 2	Phase 3	NDA	Status/Next Steps
Ocular **PL9643 MCR Agonist** Dry eye disease (DED)						Phase 3 MELODY-1 completed - positive data FDA confirmation on protocols and endpoints **Phase 3 Melody-2 & -3 target start 2H25** **Phase 3 Melody-2 & -3 target data 2H26**
PL9588 MCR Agonist Glaucoma						**IND filing 2H25** Clinical program initiation / data 1H26
PL9654 MCR Agonist Retinal diseases						IVT delivery activities advancing **Topical delivery planned**
Gastroenterology, Men's Health, Renal **PL8177 Oral MC1R Agonist** Ulcerative colitis (UC)						Phase 2 Proof-of-Concept **Positive topline data reported 1Q25**

Glaucoma

PALATIN

Melanocortin Agonists for Ophthalmic Disease

Target markets and opportunities

Dry Eye Disease

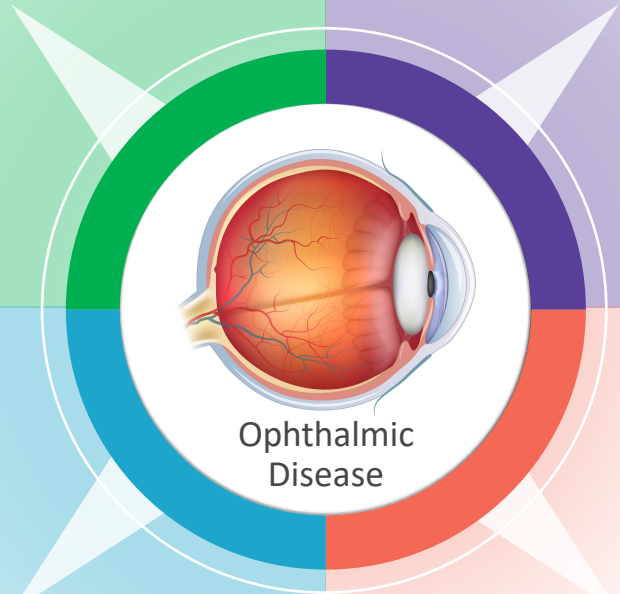
Global Market (2024 Est.) ***$7.0 Billion***
Global Market (2032 Est.) ***$12.3 Billion***

- Unsatisfied need for better tolerability, and more rapid relief of symptoms
- Current market leaders have high discontinuation rates after initial Rx's

Glaucoma

Global Market (2022 Act.) ***$8.03 Billion***
Global Market (2030 Est.) ***$11.52 Billion***

- Important dual effects; lowers IOP and protects the optic nerve (neuroprotection)
- **No current therapy provides direct protection of the optic nerve!**



Retinopathies

Global Mkt (2021 Act.) ***$20 Billion***
Global Mkt (2027 Est.) ***$27 Billion***
DR/DME (2023 Act.) ***$10 Billion***
DR/DME (2034 Est.) ***$17.5 Billion***

- Novel MOA expands treatment, addresses non-responders in addition to neovascularization, and treats fibrosis
- Potential for topical formulation to treat patients with early-stage disease before onset of substantial retinal damage

Cornea Protection

Significant Unmet Medical Need
Novel Indication

- Protection against serious ocular adverse events

PALATIN

Dry Eye Overview

Dry eye disease (DED) or **keratoconjunctivitis** is a multifactorial disorder of the tears and ocular surface

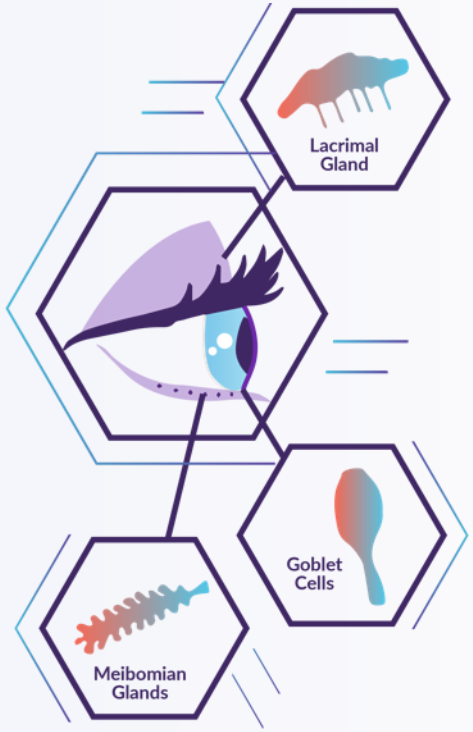
Symptoms include dryness, irritation, redness, discharge and blurred vision

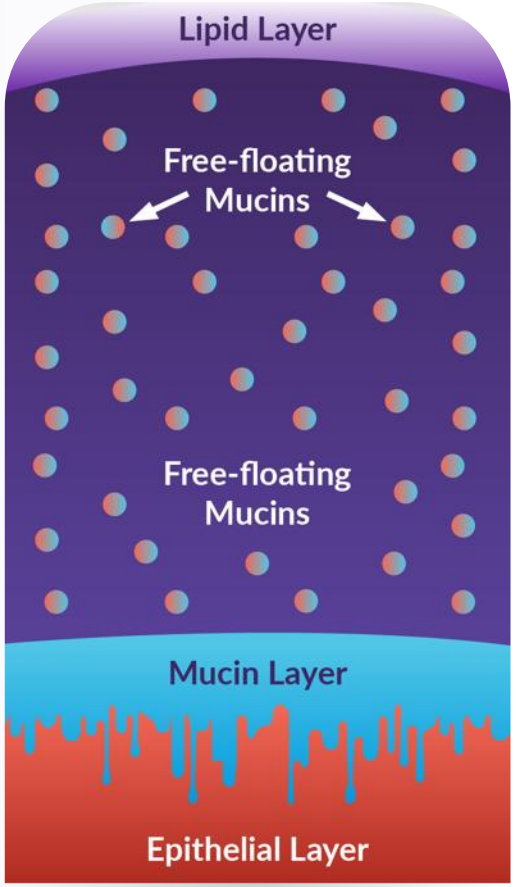
Inflammation plays a prominent role in the development and amplification of the signs and symptoms of DED

A few of the approved **Treatments** within the current global dry eye products market ~$6.1 billion[2024] projected to reach ~$7.46 billion[2029]

- Restasis® / Cequa® - topical cyclosporine
- Xiidra® - topical integrin inhibitor
- Tyrvaya® - nasal varenicline
- Eyesuvis® - topical steroid(s)
- Miebo® – perfluorohexyloctane
- Artificial tears

Current treatments have efficacy and tolerability issues, whereas ***PL9643 addresses a high medical need for innovative treatments that treat underlying disease processes with better ocular tolerability***.





PALATIN

PL9643 for Dry Eye Disease

U.S. market value $1.65 billion[1]

The Problem

- No effective chronic treatment that can provide rapid relief of dry eye disease symptoms without tolerability issues

The Opportunity

- 30MM patients (18MM diagnosed)
- <10% treated by Rx

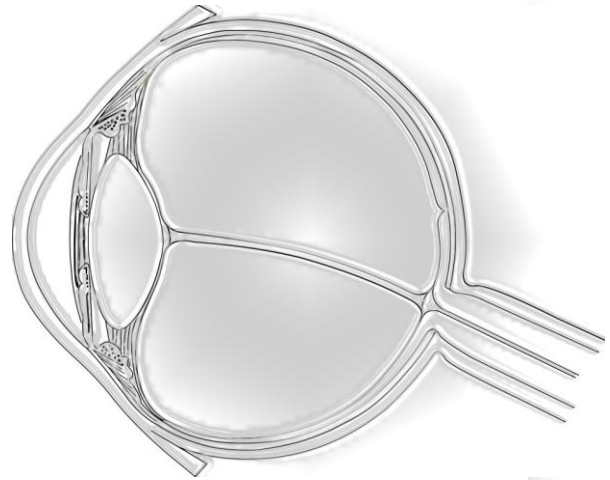
Current Treatment

- OTC artificial tears, Rx anti-inflammatories and nasal tear stimulants
- Current Rx products are not effective in many patients
- Approved products have significant tolerability issues

Melanocortin agonism

Resolves inflammation of corneal surface

Melanocortin Receptors present on multiple cell types of the ocular surface



Melanocortin agonism leads to resolution of inflammation and promotes tissue repair, resulting in rapid relief of dry eye symptoms.

PL9643 solves 3 recognized problems with current treatments: Efficacy, Onset Time to Effect, and Tolerability.

1. Market Scope 2021 Dry Eye Product Market Review; Does not include the over-the-counter artificial tears and other Rx anti-inflammatory and tear stimulants

PALATIN

Patient Satisfaction is an Issue with Current Therapies

Poor tolerability leads to high discontinuation rates

Patients Receiving Rx for Dry Eye (48%)[7]

Restasis® (Cyclosporine Ophthalmic Emulsion) 0.05%

- **Response Rate 68-80%[1-4]**
- **Discontinuation Rate 70.8%[5,6,8]**
  - Burning 72%
  - Slow onset of effect 29%
  - Altered sensation of taste 21%
  - Blurred vision 37%
  - Ineffective relief of dry eye 31%

xiidra™

- **Response Rate Unknown**
- **Discontinuation Rate 64.4%[5,6,8]**
  - Burning 64%
  - Slow onset of effect 11%
  - Altered sensation of taste 56%
  - Blurred vision 50%
  - Ineffective relief of dry eye 22%

Side effects such as burning, blurry vision, and bad taste are main reasons for poor compliance, while lack of efficacy is also a main driver for discontinuation of Restasis

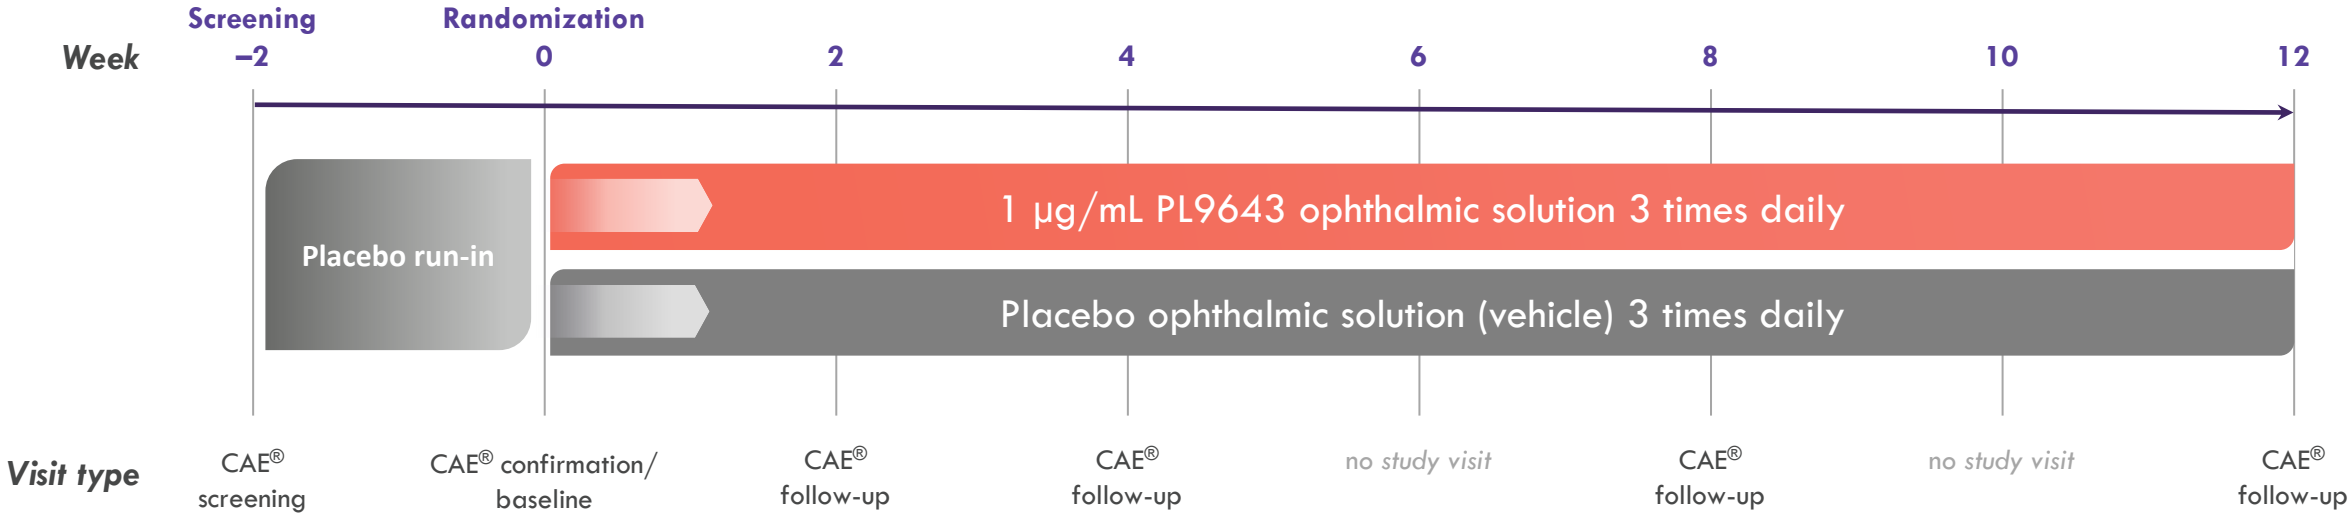
Sources: 1. Sall K et al., (2000); 2. Schultz et al., (2014); 3. Torricelli et al., (2014); 4. Williamson et al., (2015); 5. Mah et al,. Clin Ophthalmol (2012); 6. White et al. Clin Ophthamol (2019); 7. Lum et al. Amer. Academy of Optometry (2018), 8. White et al. Clin Ophthalmol (2020)

PALATIN

PL9643 Melody-1 Phase 3 Study Design

12-week, multicenter, 1:1 randomized, double-masked, vehicle-controlled adaptive design study

Evaluate the efficacy and safety of PL9643 (575 patients enrolled) with moderate or severe dry eye disease defined as:
Disease duration ≥ 5 years; Inferior Corneal Staining score >1; Eye Discomfort score ≥ 25 as measured by the Visual Analog Scale (VAS)



Co-Primary Sign Endpoint (Week 12)
Conjunctival Sum Lissamine Green Staining

Co-Primary Symptom Endpoint (Week 12)
Ocular Pain

CAE®, controlled adverse environment

PL9643 for Dry Eye Disease

Melody-1 Phase 3 clinical trial

Solves 3 recognized problems with current treatments: Efficacy, Onset Time to Effect, and Tolerability

Broad Efficacy Across Multiple Signs and Symptoms

- Co-Primary symptom endpoint of pain met statistical significance (P<0.025)
- 7 of 11 Secondary symptom endpoints met statistical significance (P<0.05)

Rapid Onset of Efficacy in 2-weeks

- Statistically significant efficacy for multiple signs and symptoms at 2-Weeks
- Continual improvement in symptom endpoints over the 12-week treatment period
- Fluorescein sign 2-Week evaluation all 4 fluorescein staining endpoints met statistical significance (P<0.05)

Excellent Ocular Tolerability & Safety

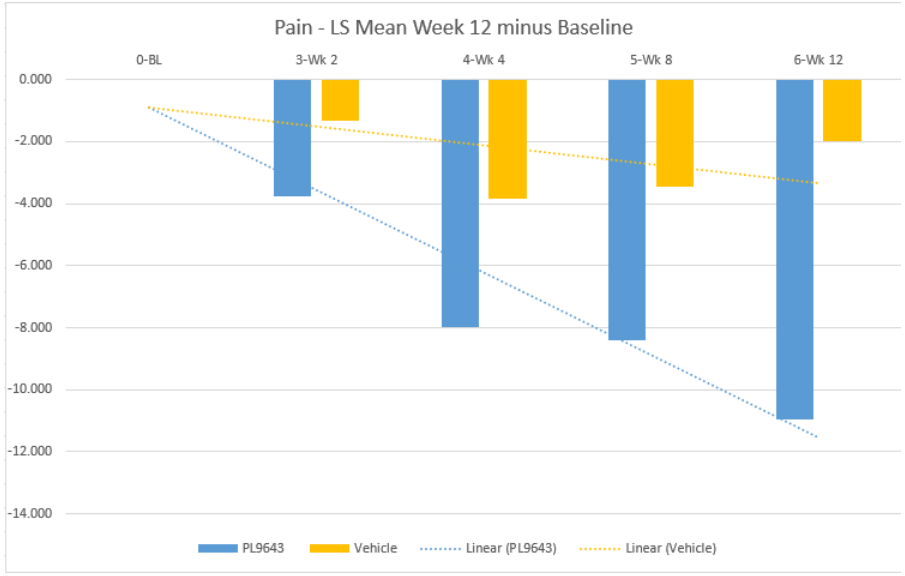
- PL9643 had numerically fewer ocular AEs than artificial tears
- No discontinuations due to ocular AE's

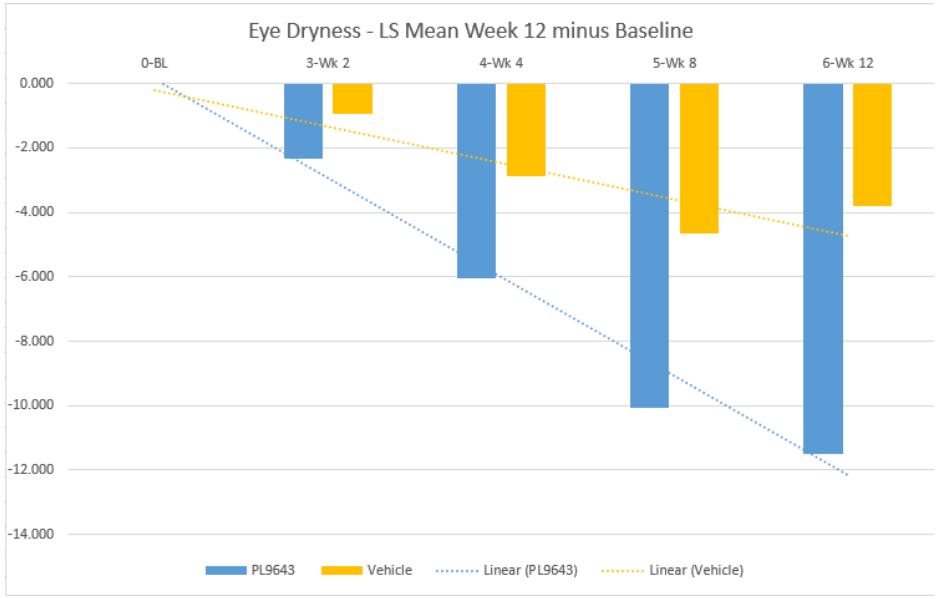
Symptom relief and tolerability will drive market uptake.
PL9643 is differentiating on both symptom relief and tolerability.

PALATIN

PL9643 for Dry Eye Disease

Pain & Eye Dryness symptoms: best-in-class symptom relief





- Multiple symptom endpoints statistically significant including co-primary Pain endpoint
- Rapid onset of efficacy at 2-weeks (earliest time point measured)
- Continuous improvement over the 12 weeks of treatment
- DED studies enroll mainly older women (65%-80%, mean age ≥60) and response can vary by age and gender

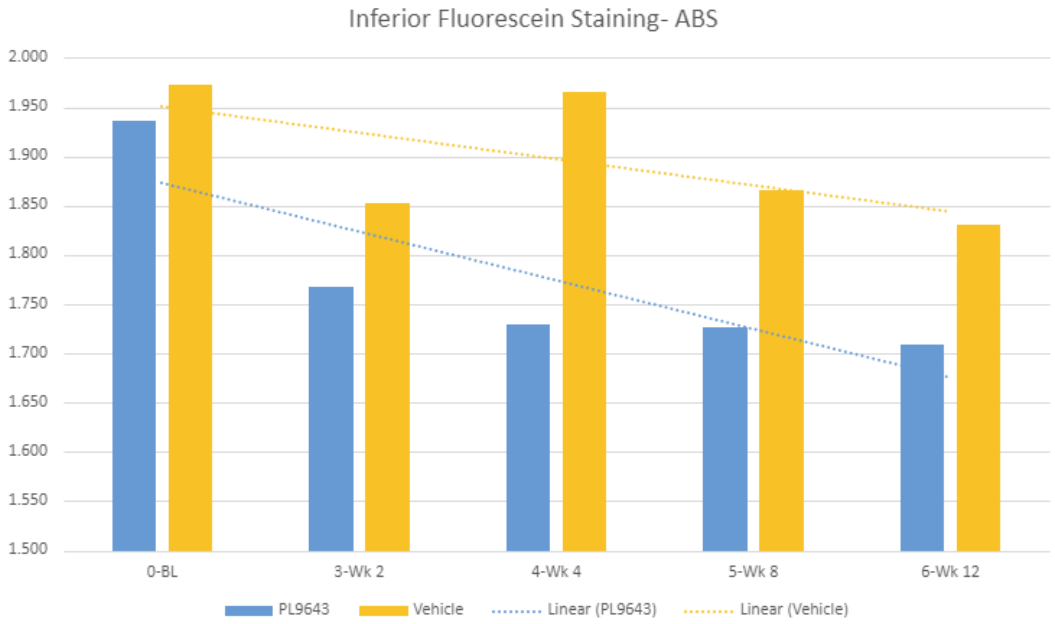
DED Symptom	ITT Population P-value	All Subjects Age >60 P-value
Burning	0.0370	0.0111
Burning/Stinging	0.1792	0.0026
Dryness	0.0417	0.0136
Eye Dryness	0.0043	0.0119
Grittiness	0.2357	0.0255
Ocular Discomfort	0.0091	0.0077
Pain	0.0217	0.0017
Photophobia	0.0078	0.0032

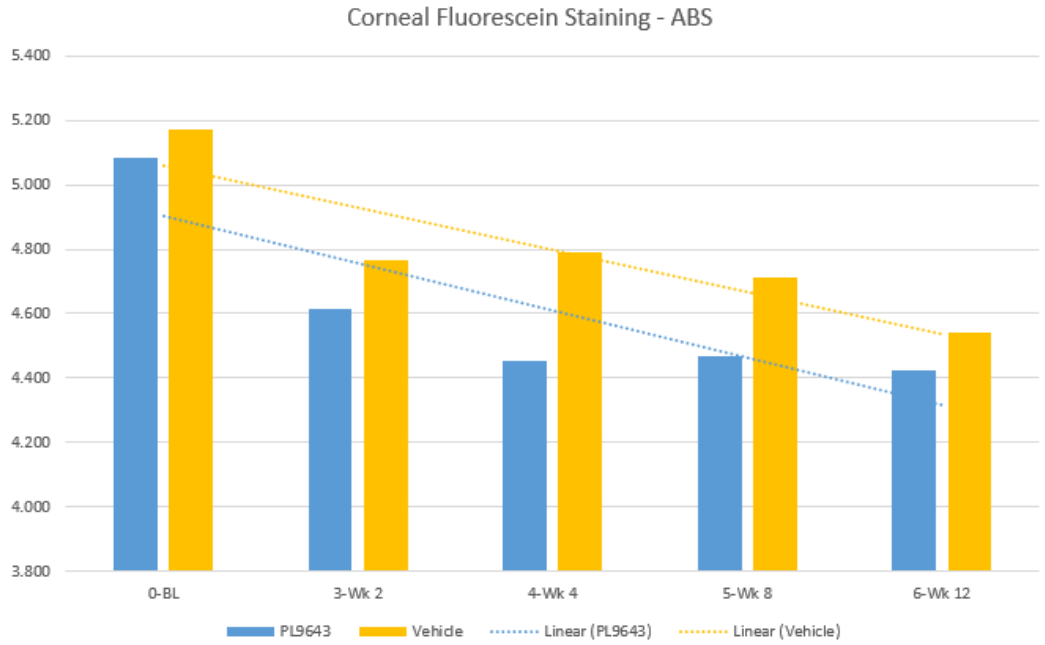
Change from baseline at 12-weeks pre-CAE PL9643 v. Vehicle

PALATIN

PL9643 for Dry Eye Disease

MELODY-1 sign endpoint





- PL9643 separates from Vehicle at 2-weeks (earliest time point measured) and continues to improve over 12 weeks
- Primary sign endpoint did not reach statistical significance
- Fluorescein staining endpoints statistically significant ITT population at 2-weeks post-CAE
- IFCS 2-weeks post-CAE primary sign endpoint for MELODY 2 & 3

2-weeks post-CAE	P-Value
Inferior Fluorescein Staining	0.0082
Corneal Fluorescein Staining	0.0065
Central Fluorescein Staining	0.0080
Total Eye Fluorescein Staining	0.0551

PALATIN

PL9643 for Dry Eye Disease

Safety and ocular tolerability

PL9643`	Phase 2 Study		Phase 3 Study

Lost to Follow-up	0%	0%	0.7%	2%
All other reasons	1%	2.5%	5.6%	7.3%

Phase 3 Melody-1 Study (n=575)

- PL9643 eye drop formulation was well-tolerated, similar to artificial tears
- No treatment related serious adverse events
- Ocular adverse events were mild
- Fewer ocular treatment related adverse events and discontinuations in the PL9643 arm compared to vehicle

Phase 2 (n=160)

- No treatment-related serious AE's or ocular adverse events were observed with PL9643 treatment

PALATIN

PL9643 for Dry Eye Disease

Program summary / next steps

Robust Phase 3 Program

- Three Efficacy/Long Term Safety Studies:
  - MELODY-1 (completed)
  - MELODY-2 & -3
    - FDA confirmation of protocols & endpoints
  - Long term safety study

NDA Package & Target Filing

- NDA File: Efficacy, Safety and CMC data
- NDA File Date (Est.): 2H 2026
- FDA Approval/Launch (Est.): 2H 2027

Expected Phase 3 Data Read Out

- Remaining Phase 3 pivotal trials
  - Melody-2 & -3 initiation target 2H 2025
    - Topline data readout 2H 2026
- MELODY-2 & MELODY-3 safety extension:
  - 6-month data in 2H 2026 /12-month data in 1H 2027

Best Overall Product Profile

- Broad efficacy across multiple signs and symptoms
- Rapid onset of efficacy in as little as 2-weeks
  - Teats multiple symptoms and signs
- Excellent ocular safety and tolerability

Solves 3 main problems with current treatments: Efficacy, Onset Time, and Tolerability.

PL9643 is a development stage product candidate and is not approved by any regulatory agency

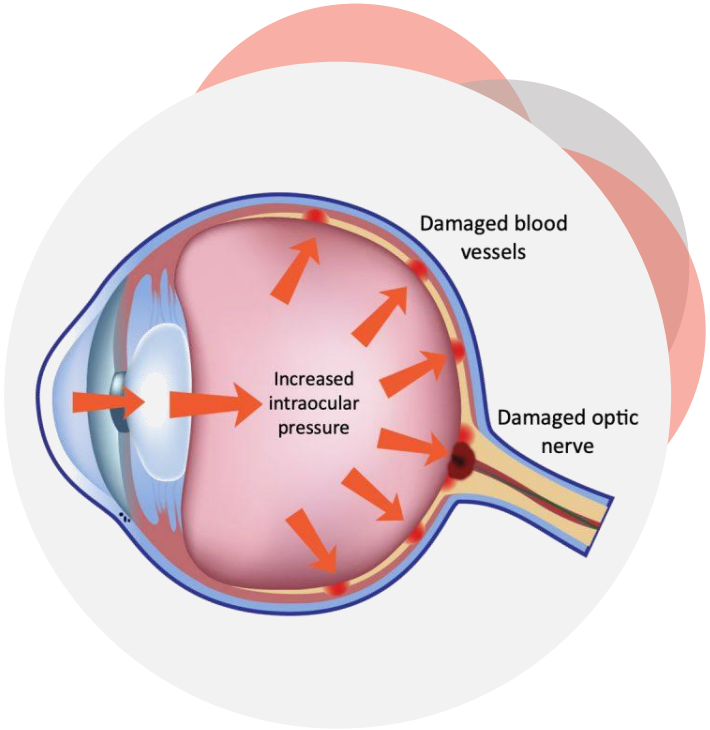
PALATIN

PL9588 Treating Glaucoma

Lowers IOP and direct neuroprotection

- Progressive eye diseases characterized by elevated intraocular pressure (IOP) resulting in loss of retinal ganglion cells and progressive loss of vision (open angle glaucoma), 2nd leading cause of blindness
- In U.S. ~3.4M people have open angle glaucoma*
  - ~50% diagnosed and on treatment
- Goal of drug therapy is reduction & maintenance of lower IOP
  - Prostaglandins, 1st line therapy
  - β-agonists and α-agonists, main adjunct treatments
  - ~62% of patients discontinue therapy within 18 months**

Ocular safety & tolerability issues



- PL9588 novel mechanism addressing unmet needs in treating glaucoma
  - Provides neuroprotection
  - Lowers IOP with improved ocular safety and tolerability
  - Treating disease progression
  - Prepared to initiate clinical development

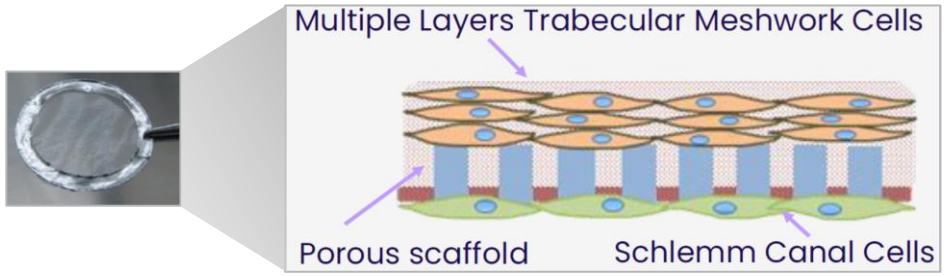
*IQVIA 2019 (TD Cowen , March 2023, Thera DED and Glaucoma, p. 35)
**Spooner, JJ et. al. Am J Manag Care Aug:8(10suppl):S262-70

PALATIN

PL9588 Treating Glaucoma

Mechanism of action lowering IOP

Humonix' Model



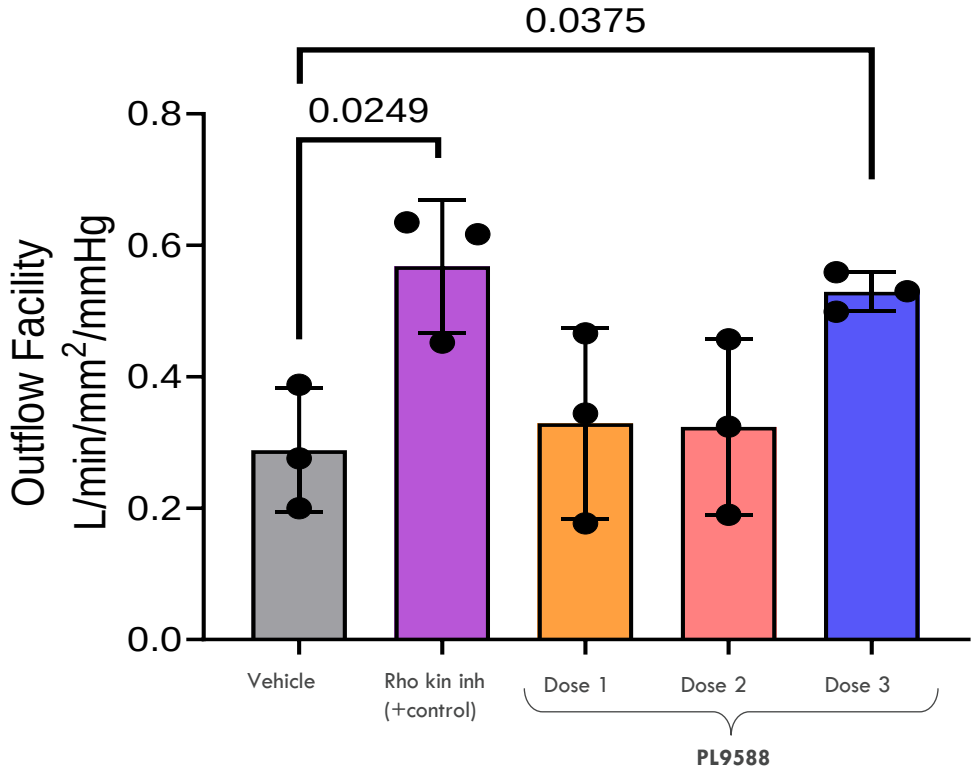
PL9588 tested in a fluid outflow model

- Human donor trabecular meshwork and Schlemm's canal cells reconstituted

PL9588 as effective as rho kinase inhibitor

- Most potent IOP lowering glaucoma treatment
- ROCKi* has poor tolerability and safety

PL9588 mechanism of action supports monotherapy or combination therapy.



*Netarsudil approved to treat glaucoma

PALATIN

PL9588 for Glaucoma

Program summary / next steps

PL9588-Lead Development Compound

- Topical eyedrops
- Ocular tox programs are short
- ~3 quarters /~$5 million to Phase 1 safety-IOP data

NDA Package & Target Filing

- NDA File: Efficacy, Safety and CMC data
- NDA File Date (Est.): 2029
- FDA Approval/Launch (Est.): 2030

Efficient Development Program

- IND 2H 2025
- Phase 1 study data 1H 2026
- Phase 2 study data 2H 2027
- Phase 3 study data 2H 2028

Overall Product Profile

- Differentiated profile that addresses unmet needs
- Lowers IOP
- Improved ocular safety and tolerability

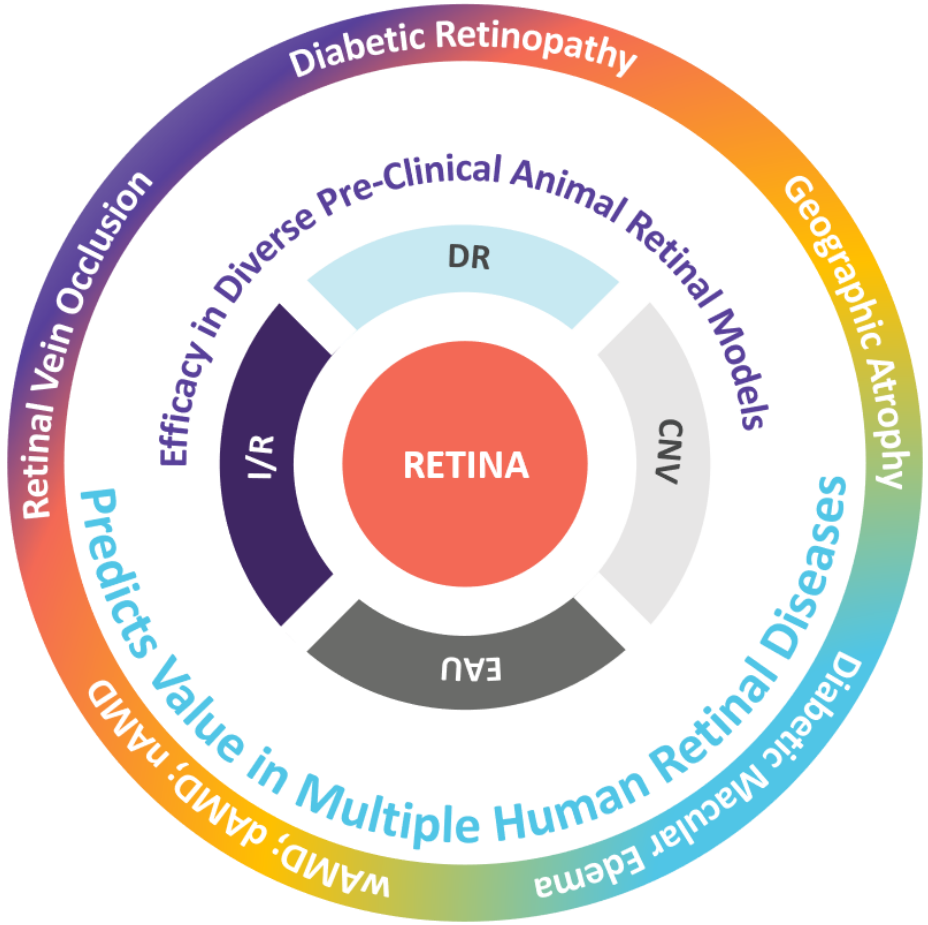
Treatment differentiation: provides neuroprotection, lowers IOP with improved ocular safety and tolerability.

PL9588 is a development stage product candidate and is not approved by any regulatory agency

PL9654 For Retinal Diseases

Executive Summary

- Retinal disorders current drug market was USD ***$12.57B*** (2022) and is projected to be ***$25.6B*** by 2030
  - DR/DME estimated was ~***$10B*** (2023)
- IVT anti-VEGF and steroids 1st line treatments
- New treatments with novel MOA needed to expand treatment and address non-responders
- Palatin melanocortin agonists active in 4 pre-clinical retinal disease models*
  - Predictive of potential efficacy in multiple retinal diseases
- PL9654 lead candidate is prepared for clinical development



* Data available for review.
DR: Diabetic Retinopathy CNV: Choroid Neovascularization EAU: Experimental Autoimmune Uveitis I/R: Ischemia/Reperfusion

PALATIN

PL9654 For Retinal Diseases

U.S. diabetic retinopathy market value $2.4 billion

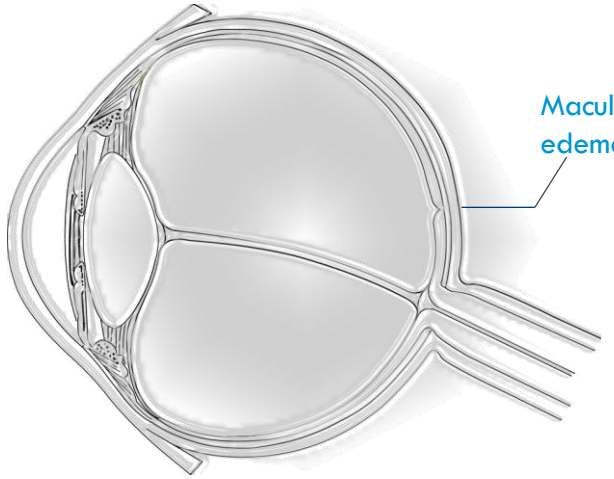
The Problem

- Retinal diseases are associated with neurodegeneration processes and fibrosis that have a long-term impact on vision

Current Treatment

- IVT angiogenesis inhibitors do not treat the neurodegeneration and fibrosis associated with retinal diseases
- IVT steroids have long term safety issues

MOA: Melanocortin Agonism



PL9654 protects against neurodegeneration, resolves inflammation, reduces fibrosis, maintains retinal-blood barrier and enhances retinal cell response to stress.

PL9654 demonstrated robust efficacy in multiple retinal disease models with the potential for topical administration.

PALATIN

PL9654 for Retinal Disease

Summary

Novel mechanism to advance the treatment of retinal diseases:

PL9654 lead compound ready to advance to clinical development

- Efficacy established in 4 models of retinal disease
- Genomic and proteomic data advances understanding of MoA
- Sustained release IVT formulation with potential for topical administration

Key efficacy effects

- Preserves vision in diabetic retinopathy model
- Neuroprotective
- Anti-angiogenesis through novel mechanism
- Resolves pathological inflammation & reduces fibrosis
- Maintains Blood-Retinal-Barrier

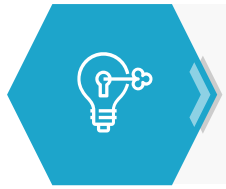
PALATIN

Palatin Melanocortin Agonists for Ophthalmic Disease

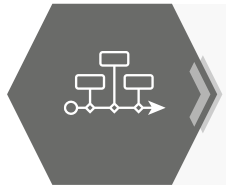
Summary

Novel differentiated products for ophthalmic indications

Melanocortin MoA delivers efficacy with excellent safety & tolerability



Proprietary compounds with long term IP estate



Short, well defined, clinical pathways for regulatory approval

Potential high return on investment

- Multi-billion USD portfolio with low upfront investment

PALATIN

PL8177 Oral for Ulcerative Colitis

PALATIN

PL8177 Oral Formulation for Ulcerative Colitis

Global ulcerative colitis (UC) market USD ***$5.5 billion*** 2021, projected to be ***$8 billion*** by 2026

Most treatments for UC are systemic and have ***tolerability and safety limitations***

PL8177 is a ***highly potent selective*** agonist at melanocortin receptor 1

Why a Melanocortin Peptide for Ulcerative Colitis?

Phase 2 study evaluating safety and efficacy of PL8177-Oral in UC patients ongoing; enrollment completed; topline data1Q 2025

MC1R ***on colon epithelial cells*** is accessible from the lumen of the colon. PL8177-Oral demonstrated robust efficacy in UC animal models

PL8177 is ***not systemically absorbed***

- Potential for excellent efficacy without safety concerns
- Phase 1 SC SAD/MAD study - no significant findings
- Oral Phase 1 study – confirms colon delivery

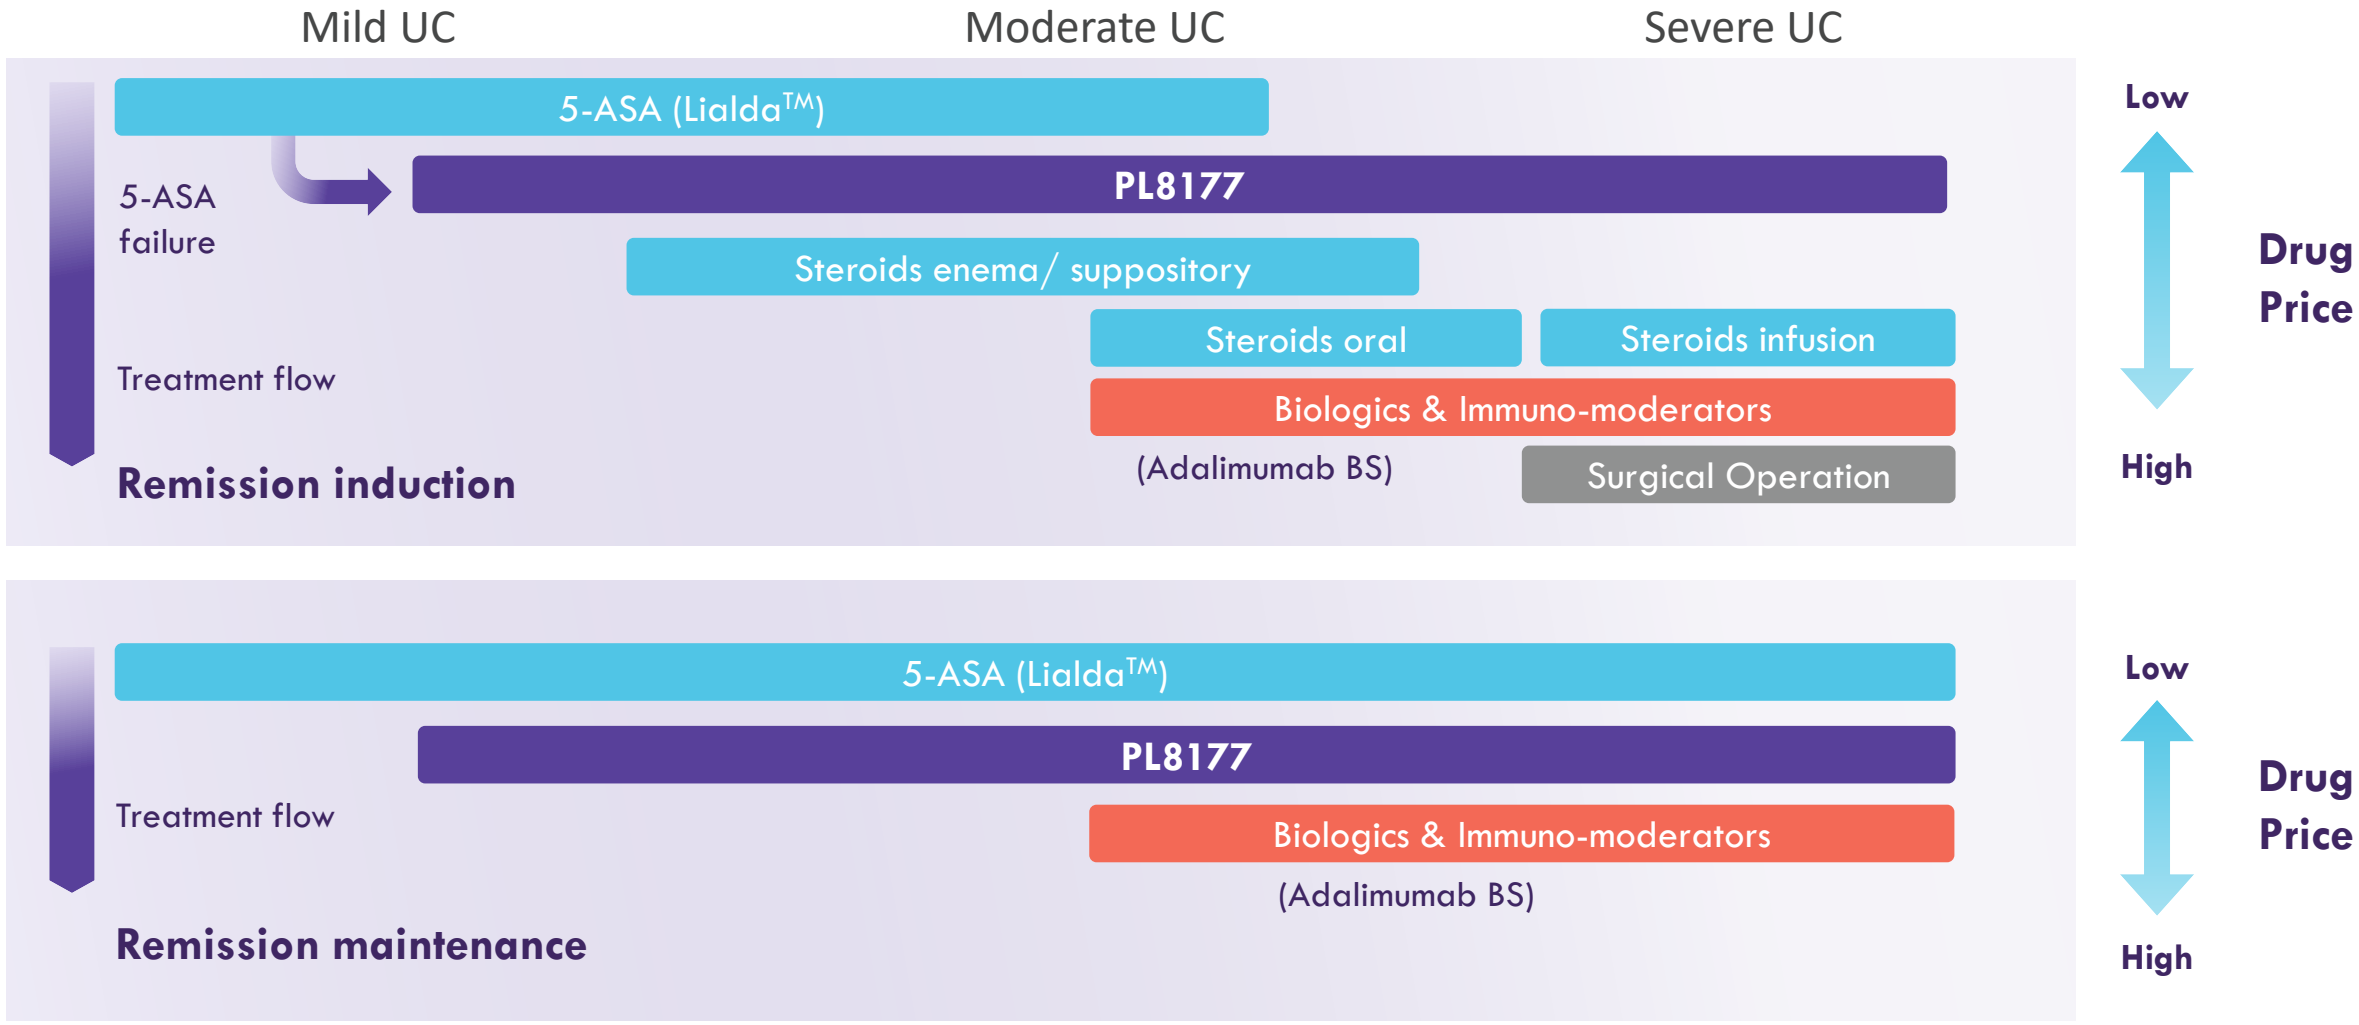
"Currently available therapies cannot cure IBD, but many of them target various inflammatory pathways, resulting in more or less durable remission. However, these therapies come at a high price economically and physically, with potentially life-threatening side effects."

N. ENGL J MED 385:14 September 30, 2021

PALATIN

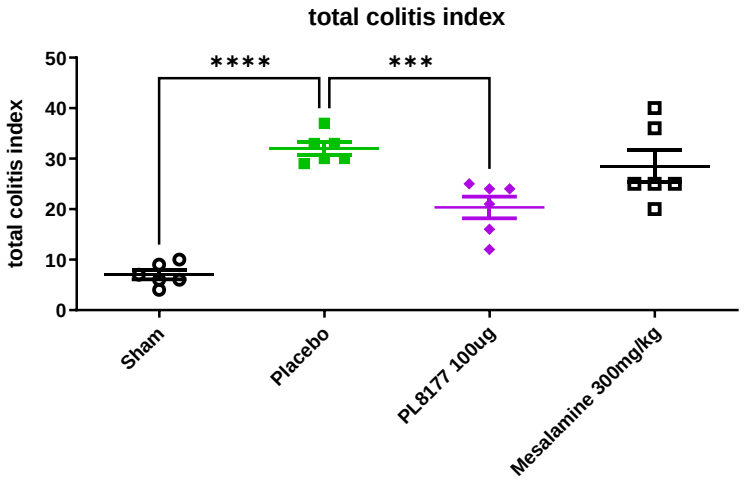
UC Patient Treatment Paradigm

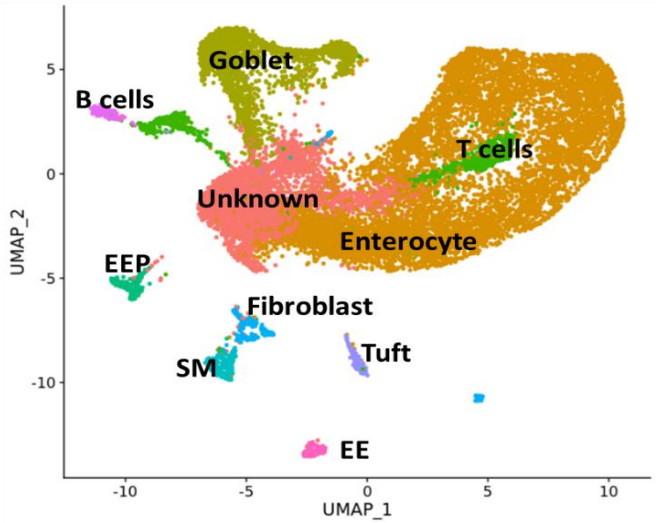
Opportunity for PL8177 in treating UC indication throughout the treatment paradigm



PALATIN

PL8177-Oral Preclinical Data Rat DSS Model





Total colitis index

- Abnormalities of mucosal architecture
- Extent of inflammation
- Erosion & ulceration
- Epithelial regeneration
- Percentage involvement by the disease process

Single nuclei RNAseq of DSS rat colon

- Preserves enterocyte cell population
- Prevents increase of inflammatory T cell population
- Down regulation of multiple inflammatory pathways

PALATIN

PL8177-205 Phase 2 Study Design & Timelines

Phase 2 RCT Parallel Group Study Using an Adaptive Design to Evaluate Safety, Tolerability and Efficacy

Patient Population

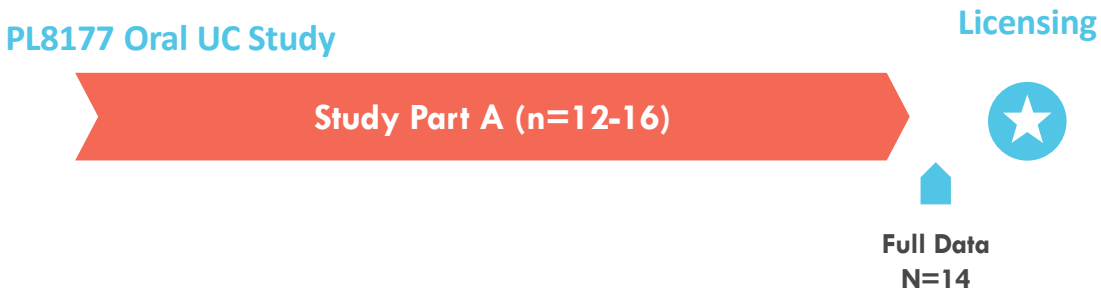
- Adult patients with active UC
- Modified Mayo endoscopic subscore ≥2

Primary Safety Endpoint

- The overall incidence of treatment-emergent adverse events (TEAEs)

Primary Efficacy Endpoint

- Proportion of patients that have MES of 0 or 1 (endoscopic improvement)



Corporate decision made to end enrollment and pursue licensing with current patient numbers (N=14)

PALATIN

Topline Data PL8177-205 Phase 2 UC Study

- Clinical Remission
  - **Achieved in 33% of PL8177 treated subjects** versus 0% on placebo after 8-weeks of treatment
- Clinical Response
  - **Achieved in 78% of PL8177 treated subjects** versus 33% on placebo ($p<0.005$) after 8-weeks of treatment
- Symptomatic Remission
  - **Achieved in 56% of PL8177 treated patients** versus 33% of on placebo
- Safety and tolerability was **excellent - no adverse events**
- For the subset of patients with moderate disease (segment endoscopic score of greater than or equal to 1 in the rectum, descending colon, and sigmoid colon segments) at baseline were
  - Three of five **(60%) PL8177-treated patients showed improvement in all three segments**
  - Four of five **(80%) PL8177-treated patients showed improvement in two of the three segments**
  - Zero of one **(0%) placebo patients showed improvement in two or more segments**

Ulcerative Colitis – Target Product Profile for Commercial Success

PL8177 Preclinical Profile

- High potency at melanocortin receptors 1
- Efficacy in multiple animal models including gold standard disease model
- Efficacy as good/better than 5-ASA and glucocorticoids in animal model data
- No toxicological findings in pre-clinical studies doses >100-fold above planned clinical doses

PL8177 Oral Formulation PK

- Phase 1 radiolabeled micro-dose study with the oral formulation, **confirmed colonic delivery** of PL8177
- Orally dosed PL8177 remains in the colon – there is no systemic exposure

PL8177 Clinical

- Phase 1 clinical SAD/MAD study with the systemic formulation (SC) completed, no adverse events or safety signals
- Positive Phase 2 study in UC patients: PL8177 treated patients had improvement in clinical remission and response

PL8177 Oral Formulation – novel, non-immunosuppressive mechanism of action

PALATIN

Melanocortin-4 Receptor Erectile Dysfunction (ED)

- Bremelanotide (BMT) MC4R Agonist
  - FDA Approved – Vyleesi® for Female HSDD
- Co-administration (co-formulation) of BMT & Tadalafil
  - PDE5i Non-Responders

PALATIN

Value of MC4R Agonists for Sexual Dysfunction

Low clinical risk, defined development pathways with potential for high returns

Bremelanotide has extensive efficacy and safety data and can be rapidly expanded to ED indication

- Evaluated in over 45 clinical studies and 10,000 patients

Novel co-formulation of bremelanotide with a PDE5i

- Extend IP
- 505(b)(2) regulatory pathway
- Potential to effectively and safely treat PDE5i failures

PDE5i failures large underserved market

- >30 million men in US have ED
- ~35% of ED patients are inadequately treated by PDE5i therapy with limited treatment options
  - Vacuum devices
  - Direct penile injection of vasodilators
  - Surgery for installation of penile implants
- **A safe and effective non-invasive treatment is needed**

PALATIN

Bremelanotide Sexual Dysfunction Clinical Experience

The MC4R agonist bremelanotide has been evaluated in multiple sexual dysfunction trials

Female sexual dysfunction studies

- Clinical studies in pre and post menopausal patients with HSDD and/or FSAD
- Statistically significant and clinically meaningful effects on improving desire, arousal and distress
- Vyleesi® - FDA approved for treating premenopausal women with HSDD

Male sexual dysfunction studies

- Multiple clinical studies in men with erectile dysfunction (ED)
- Monotherapy in ED patients and ED patients with diabetes
- Co-administration with PDE5 inhibitor in ED patients that failed PDE5i therapy
- Statistically significant and clinically meaningful effects on improving erectile activity

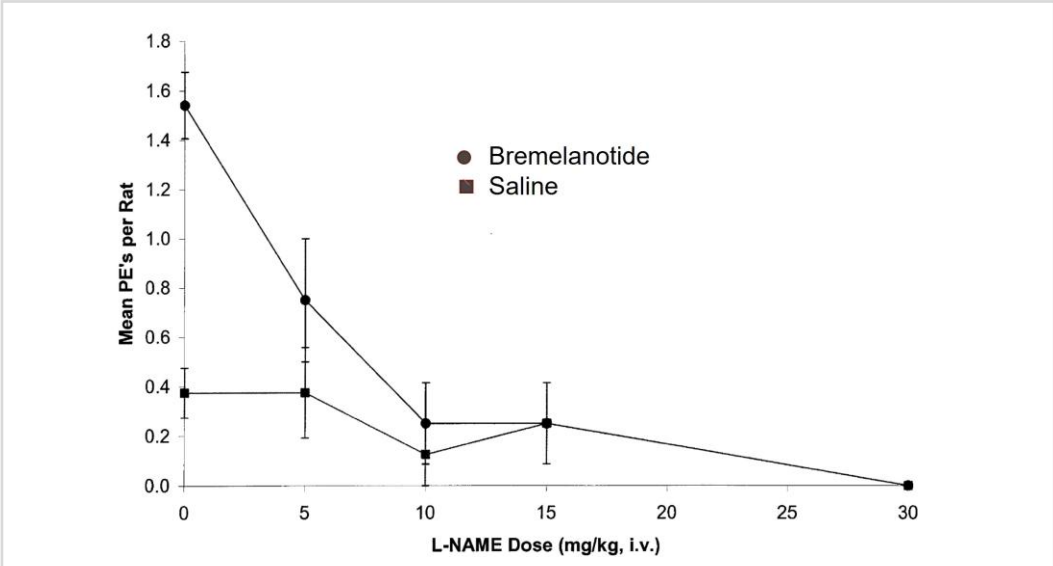
Post-approval experience in men with sexual dysfunction

- Bremelanotide is being prescribed off-label to men with ED and low sexual desire
- Re-fill rates ~70%

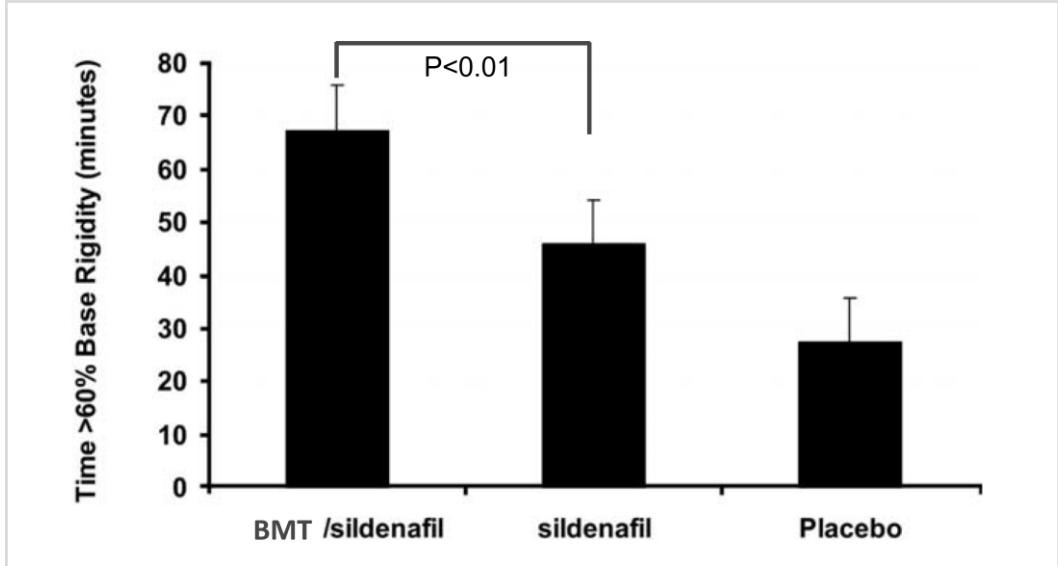
PALATIN

Bremelanotide for Treating ED

*30%-40% of ED patients have an inadequate response to PDE5i therapy, there remains an unmet need for drugs to treat men in whom PDE5i treatment fails**



BMT drives erectile activity through production of NO and cGMP.



IN ED patients BMT co-administered with sildenafil significantly improves rigidity of penile erections.

In multiple Phase 2b clinical studies bremelanotide has demonstrated statistical and clinically significant effects on improving erectile function in a broad range of ED patients including moderate/severe and patients inadequately treated by a PDE5i.

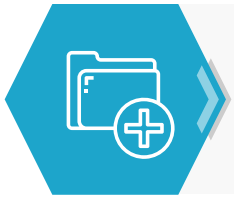
*Sex Med Rev 2019;7:430-441

PALATIN

BMT/Tadalafil Co-Formulation Development Program

Pre-IND FDA meeting 2H25

IND filing 2H25



Phase 1 PK clinical study initiation/data 2H25

Phase 2/3 safety and efficacy studies initiation target 1H26

NDA potential target submission 2028

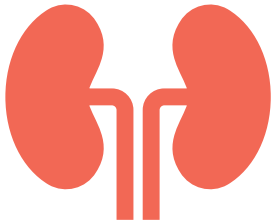
PALATIN

Melanocortin Agonist for Diabetic Nephropathy

PALATIN

Melanocortin Agonist for Diabetic Nephropathy

Diabetic nephropathy

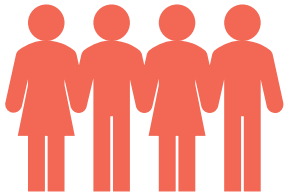


Diabetic nephropathy (DN) is a severe microvascular complication of diabetes mellitus (DM)

It is the most common form of chronic kidney disease (CKD)

A leading cause of renal failure in end-stage renal disease

No currently available treatment can achieve complete cure



Diabetes and DN prevalence

~ 30 million US patients have CKD secondary to the combination of hypertension and Type 2 diabetes mellitus

>590 million people are predicted to have diabetes worldwide by the year 2035

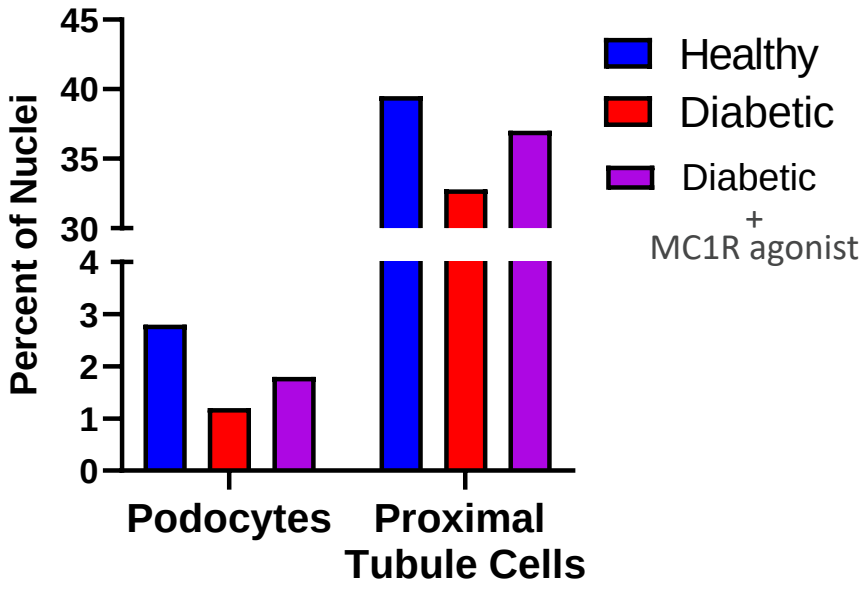
~50% of patients with diabetes will develop DN

PALATIN

Melanocortin Agonist for Diabetic Nephropathy

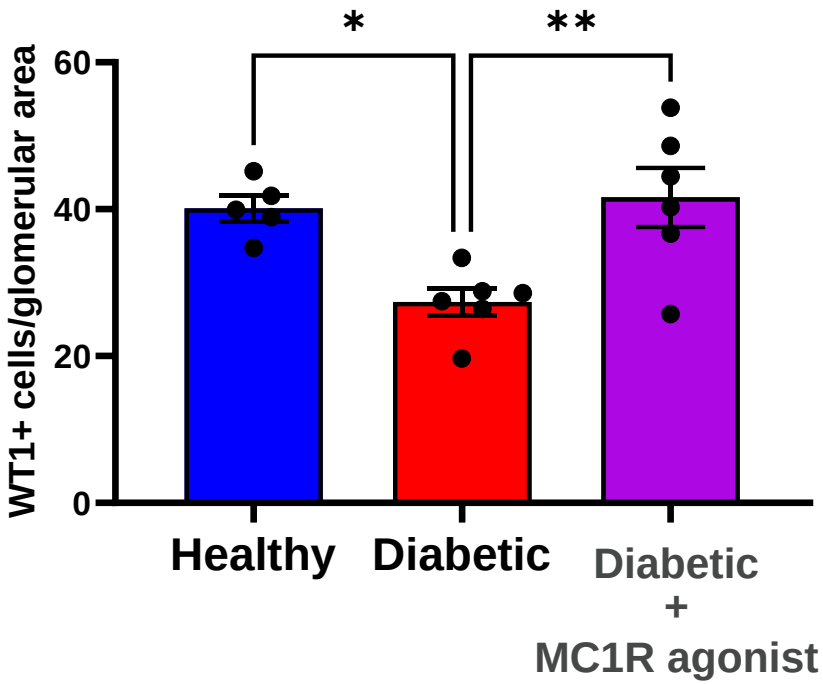
Melanocortin agonists increase key kidney cell types in diabetic rats

Cell Populations by snRNAseq*



Melanocortin agonist increases relative podocyte and proximal tubule cell populations in diabetic rat, essential for healthy kidney function.

Podocyte Density by Histopathology



Podocyte density increases in diabetic rats when treated with a melanocortin agonist.

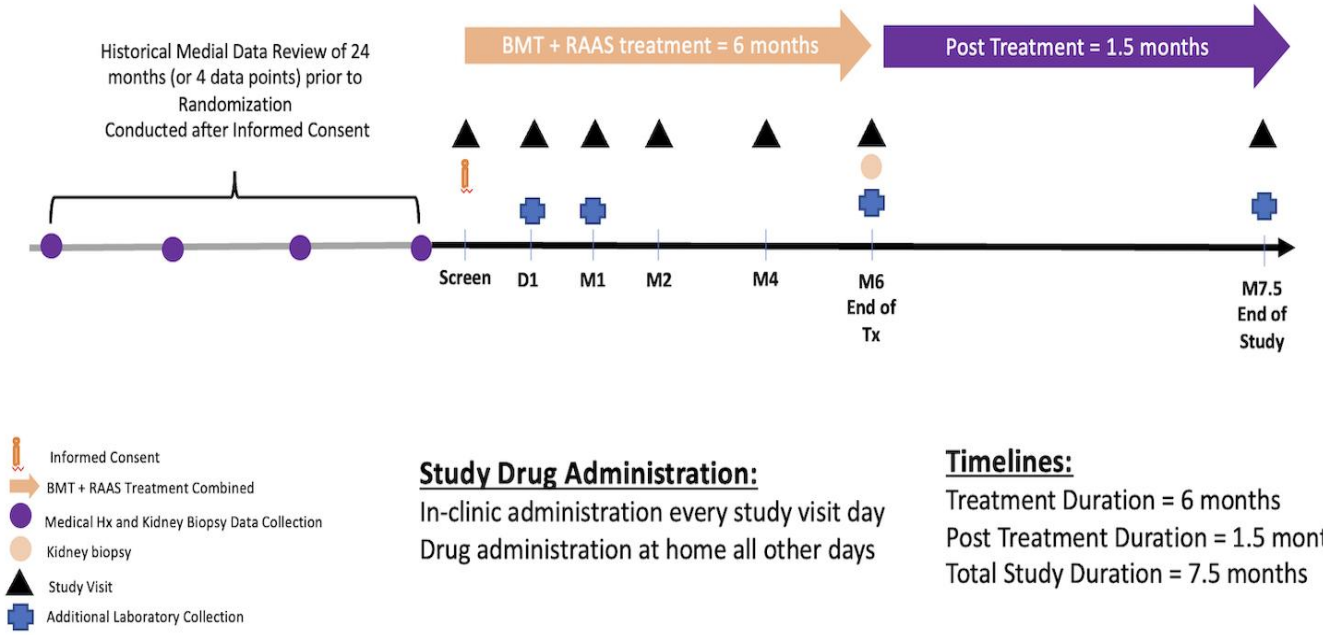
*single nucleus RNAseq

PALATIN

Melanocortin Agonist for Diabetic Nephropathy

BREAKOUT study in diabetic nephropathy

BREAKOUT Study Schema



Study Drug Administration:
In-clinic administration every study visit day
Drug administration at home all other days

Timelines:
Treatment Duration = 6 months
Post Treatment Duration = 1.5 months
Total Study Duration = 7.5 months

Primary Research Question

- Proportion of subjects with a ≥50% reduction in UP/Cr

Secondary Research Questions

- Proportion of subjects that achieve a reduction in UP/Cr ratios of ≥ 30% from baseline
- Proportion of subjects that achieve a <5.0 ml/min/year drop in eGFR
- Proportion of subjects with a ≥ 50% increase in urinary VEGF levels

All evaluated at six months in subjects on maximum tolerated RAAS inhibition therapy plus BMT

- Patients with biopsy-proven type II diabetic kidney disease and ≥1000 mg/gm UP/Cr ratio
- Enrollment concluded with N=16 (N=8 evaluable patients)
- BMT 0.5 mg SC (BID) plus maximum tolerated RAAS inhibition

PALATIN

Melanocortin Agonist for Diabetic Nephropathy

Topline results – BREAKOUT Study in Diabetic Nephropathy

- Addition of Bremelanotide to maximum tolerated RAAS inhibition therapy
  - Resulted in positive and clinically beneficial improvements in kidney function and delaying disease progression
- The data from this trial is encouraging
  - Validates modulation of the melanocortin system as a potentially new therapeutic strategy
  - Potential disease-modifying treatment option for people living with this progressive kidney disease

Results

- 57% of patients achieved a clinical response >30% reduction from baseline in UP/Cr
- 14% of patients achieved partial remission >50% reduction from baseline in UP/Cr
- 71% of patients achieved improved or stabilized estimated glomerular filtration rate (eGFR)
- 37.5% of patients had a > 50% increase in urinary vascular endothelial growth factor (VEGF) levels
- 50% of evaluable patients had a >30% reduction in urinary synaptopodin

PALATIN

Vyleesi® - FDA Approved for Female HSDD

- Developed by Palatin
- Acquired by Cosette (December 2023)

PALATIN

FDA Approved Vyleesi® for Female HSDD

Helping Premenopausal Women with Hypoactive Sexual Desire Disorder (HSDD)

vyleesi
(bremelanotide injection)
1.75 mg/0.3 mL | for subcutaneous use only

Hey, you. Meet Vyleesi.
...it's Now Approved

Vyleesi is the first and only as-needed* treatment for premenopausal women with acquired, generalized hypoactive sexual desire disorder (HSDD).

Reconnect with your desire

*Administer subcutaneously as needed at least 45 minutes before anticipated sexual activity. The duration of its effect after each dose is unknown. Do not administer more than one dose within 24 hours or more than 8 doses per month.

Visit: www.vyleesi.com / www.vyleesipro.com

PALATIN

Sale of Vyleesi® to Cosette Pharmaceuticals – December 2023

Cosette acquired Vyleesi asset and rights for FSD (HSDD)

$12 million upfront

Potential sales-based milestones of up to $159 million
Based on annual net sales ranging from $15 million to $200 million

Palatin retained rights and use of bremelanotide (Vyleesi) for obesity and male ED treatment indications

Palatin provided, and was reimbursed for, certain transitional services to Cosette over a defined period of time

Milestones

Melanocortin System Development Programs	Date
Obesity - MC4R Agonists – Weight Loss (Maintenance)	
Phase 2 BMT-801 Clinical Study Bremelanotide + GLP-1 – **Positive Topline Data Readout**	**Completed**
Novel MC4R Selective Long-Lasting Agonist – **IND Filing / SAD/MAD Data**	**4Q25 / 1H26**
PL7737 MC4R Oral Small Molecule Agonist – **IND Filing / SAD/MAD Data**	**4Q25 / 1H26**
Spin-Out / Out-License Product Candidates Seeking Development & Commercial Partnerships (investment bank engaged to support process)	
PL9643 – Dry Eye Disease (DED)	
Phase 3 Melody-1 Clinical Trial - Positive Results Reported	Completed
Melody-2 and -3 Phase 3 Pivotal Clinical Trials Initiation Target	**2H25**
FDA Confirmation on Protocols and Endpoints	
PL8177 Oral – Ulcerative Colitis	
Phase 2 Proof-of-Concept – **Positive Topline Data Readout**	**Completed**
Bremelanotide/MC4R + PDE5i (Co-Formulation Single Injection) – Erectile Dysfunction (ED)	
Development and Clinical Study Program in PDE5i Non-Responder ED Patients Initiated	
Pharmacokinetics (PK) Study	**2H25**
Phase 2/3 Clinical Study Initiation	**1H26**
MC4R Agonist – Diabetic Nephropathy	
Phase 2 Open Label Trial – **Positive Topline Data Reported**	**Completed**
Vyleesi (bremelanotide) for Hypoactive Sexual Desire Disorder (HSDD)	
Asset Sale for FSD Rights to Cosette Pharmaceuticals December 2023	Completed
Up to $159 Million in Potential Sales Milestones	Ongoing
